stephen hawking present occupant of the lucasian chair at cambridge university is today one of the best known theoretical cosmologists in the world his important contributions in collaboration with roger penrose to the physics of black holes are well known but this does not make comparable to those of albert einstein as some times is affirmed in the mainstream media in this book hawking s work as presented at the vatican study week on astrophysical cosmology 1981 his bestseller a brief history of time 1988 his lecture on gödel and the end of physics 2002 and the grand design 2010 are briefly examined in them many philosophical questions are raised but no rigorous answers are provided in the second half of the book chapters on the origin of science in the christian west the post renaissance scientific revolution the true pioneers of modern physics put contemporary cosmology in a proper perspective the authors conclude that contemporary observational data are compatible with a finite open and contingent

universe rather than with everything coming out of nothing this book puts in a proper historical perspective contrary to hawking s that the universe is intelligible as attested by the monumental fact of modern science and therefore that it is contingent and therefore created very often contemporary theoretical cosmologists ignore the crucial contributions made in medieval europe to the birth of modern physics this book intends to bridge the gap in accessible language for the non specialist
