the temperature measurement of liquid in a tank can be controlled by classical and advance control algorithms applying pid fuzzy logic sfb lqr here we consider a three tank noninteracting system we observed that tank1 affects the dynamic behavior of tank2 similarly tank2 affects the dynamic behavior of tank3 and vice versa because the flow rate f_1 depends on the difference between liquid levels h_1 and h_2 thus a change in the inlet flowrate affects the liquid level in the tank which in turn affects the temperature of the liquid basically it is a thermal process various types of temperature sensors include rtd t c and thermistor in this particular project the author used a mercury thermometer as sensor mathematical models of the three tank method give a third order equation each tank gives a transfer function of the first order system they make it easy to check whether a particular algorithm is giving the requisite results a lot of work has been carried out on the temperature control in terms of its stabilization many attempts have been made to control the response of temperature measuring systems

linear and non linear system theory focuses on the basics of linear and non linear systems optimal control and optimal estimation with an objective to understand the basics of state space approach linear and non linear systems and its analysis thereof divided into eight chapters materials cover an introduction to the advanced topics in the field of linear and non
