the importance of training and education is on the increase while the production of human capital is seen as a motor for a competitive economy skills and expertise proof to be necessary for social mobility remarkably in conceiving modern forms of apprenticeship several mechanisms from the acien regime seem to return the difference between public and private initiative is disappearing education and training is being confused and in order to acquire generic skills as flexibility communicability self rule creativity and so on youngsters have to learn in context even for maths scholars now talk of situated learning before the advent of a formal schooling system training took place on the shop floor under the roof of a master the apprentice not only worked but also lived in his master s house and was thus trained and educated at the same time in cities this system was formally complemented by an official apprenticeship system prescribing a minimum term to serve and an obligatory masterpiece for those who wanted to become masters themselves traditionally historians see this as an archaic and backward way of training yet this book s aim is to show that it was instead a very flexible and dynamic system perfectly in tune with the demands of an early modern economy in order to understand it fully however we should differentiate the informal training system organised via a free market of indentures on the one hand and the institutionalised system of craft guilds on the other in antwerp early modern guilds had a project of emancipating their members they didn t simply produce certain skills but through a system of quality marks defended the honour of craftsmen this is the difference with current practices by representing hands on skills as superior guilds supplied a sort of symbolic capital for workers
