this edited volume documents through its 75 years post independence the developmental complexities economic achievements and challenges unique to india given its vast population and regional cultural and climatic diversities with simple illustrations making them accessible to readers with varying levels of expertise since gaining independence the indian economy has embarked on a distinctive journey navigating through a series of economic policy experiments in diverse economic landscapes this distinct trajectory has not only accelerated its pace of economic growth but also addressed a myriad of developmental issues from poverty to well being with varied degrees of success over the years the detailed analysis and anecdotal evidence are at the core to show how the country s experience and challenges are different from the linear model of development transition and must be understood in their own context the academic papers both theoretical and empirical highlight the pace and patterns of sectoral dynamics since independence unfold the issues and

factors affecting development with a particular focus on the productivity growth of the indian economy and showcase debates that may help planning policy for vision 2047 the year when india would celebrate its centenary year of independence the book contains 24 chapters divided into ten sections covering issues related to growth strategies productivity growth agricultural transition growth heterogeneity labour rural non farm sector and migration social sectors including education and environment and debates on industrialisation and servicification the principle features of indian growth and development story given such diverse collection of chapters and discussions in them the book will find readers across the developmental economics sphere ranging from academics to policy makers as well as industry experts

although interest in spatial growth regressions has been growing in recent years formal theoretical approaches that acknowledge the role of space in economic growth have been sparse in particular in a regional context the assumption of independent non interacting closed economies can lead to misinterpretations this book fills the void by discussing neoclassical growth theory in a spatial context in order to examine growth both theoretically and empirically in a system of n regional economies a formal model is presented that allows for interregional fixed capital relocations which are in turn determined by the economies relative locations in space it is shown how initial endowments with human capital play a decisive role regarding the evolution of output and how both convergence and divergence processes may occur using a spatial econometric model specification the theoretical model is tested empirically for 255 european regions

trying to explain the sources of poland s economic success and decouple it from simple stylized facts on economic convergence anchored in the neoclassical growth models the chapters show how the polish economy rapidly moved away from the communist economic system which had ended up in an economic collapse

volumes 2a and 2b of the handbook of economic growth summarize recent advances in theoretical and empirical work while offering new perspectives on a range of growth mechanisms from the roles played by institutions and organizations to the ways factors beyond capital accumulation and technological change can affect growth written by research leaders the chapters summarize and evaluate recent advances while explaining where further research might be profitable with analyses that are provocative and controversial because they are so directly relevant to public policy and private decision making these two volumes uphold the standard for excellence in applied economics set by volumes 1a and 1b 2005 p 4 of cover

the empirical evidence reveals conditional convergence in the sense that economies grow faster per capita if they start further below their steady state positions for a homogeneous group of economies like the u s states regions of western european countries and the geod countries the convergence is unconditional in that the poor economies grow faster than the rich ones the neoclassical growth model for a closed economy fits these facts if capital is viewed broadly to encompass human investments so that diminishing returns to capital set in slowly and if differences in government policies or preferences about saving lead to heterogeneity in steady state positions yet if the model is opened to allow for full capital

mobility then the predicted rates of convergence for capital and output are much higher than those observed empirically we show that the open economy model conforms with the evidence if an economy can use foreign debt to finance only a portion of its capital even if 50 or more of the total the problems in using human capital as collateral can explain the required imperfection in the credit market

many parts of the world are currently experiencing the outcome of processes of economic integration globalization and transformation technological advances in telecommunications and in transport facilities have opened up new possibilities for contracts and exchanges among regions external effects among regions have increased in importance as a result competition among regions has intensified except some pioneering work by regional scientists and scholars of public finance and economics the phenomenon of regional competition has yet to attract the attention it warrants despite its importance for policy making the present volume is intended to remedy this neglect by providing high level contributions to the three main topics of the book the theory of regional competition methods of analysis of regional competition and policies of regional competition

master s thesis from the year 2013 in the subject economics economic cycle and growth grade 1 0 free university of bozen bolzano faculty of economics management language english abstract this thesis analyzes the two economies of south tyrol and luxembourg questioning whether their economic growth can be explained by concepts of endogenous growth theories south tyrol and luxembourg are two quite similar economies in terms of size population cultural diversity and scarcity of natural resources but yet very different in matters of economic growth income per capita and economic specialization which makes them an interesting sample to test for growth factors since endogenous growth theories in contrast to neoclassical conceptions provide a much broader range of tools to handle endogenous technological change innovation and other factors they are better suited to analyze growth factors therefore this thesis first draws a summary on the evolution of endogenous growth theories including an outline of the most important contributions it is shown that the factor human capital plays a major role in most models subsequently the second part of the thesis deals with the economies of south tyrol and luxembourg in detail evaluates historical economic growth identifies tourism and financial intermediation as their main driving forces and asks whether human capital could be the moving power behind them the method of choice for measuring is the country specific data of the human development index which is issued every year by the united nations they reveal that human capital formation cannot be the answer to the discrepancy between the growth rates of both economies consequently alternative explanations outside endogenous growth theories are sought potential causes could be foreign income growth in the case of south tyrol and dynamic capabilities together with a capacity of attracting human resources in the case of luxembourg

this innovative new text from jeffrey sachs and xiokai yang introduces students to development economics from the perspectives of inframarginal analysis and marginal analysis the book demonstrates how the new found emphasis on inframarginal analysis has influenced a shift back to an interest in classical economics from neoclassical economics inframarginal analysis vs marginal analysis is presented as a consistent theoretical framework throughout

shows how the relationship of inframarginal analysis to marginal analysis has influenced the shift back to an interest in classical economics from neoclassical economics with regard to economic development allows economists to reduce their overall reliance on marginal analysis which may be less relevant to development economics than it is to the economics of development countries brings considerable analytic machinery to bear on important problems a focus on institutions and transaction costs that is very relevant to development economics offers a thorough analysis of trade chs 3 7 and macroeconomics chs 16 19 both of which are not dealt with in depth by comparable textbooks

aims to provide a survey of the theoretical foundations of spatial location of firms and industries and to explore the impact of economic integration on this process this book is intended for scholars theorists policymakers and business executives who face these challenges to the economy

manufacturing has played a key role in the economic fortunes of the east and south asian regions this timely book analyses patterns of rapid catch up and relative stagnation in the manufacturing sector and links these to economic growth in the region dr timmer describes the manufacturing performance of five asian countries since the 1960s china india indonesia south korea and taiwan over this period asian industrial development is placed in an international perspective by comparison with the world productivity leader the usa the author uses new empirical data to assess the degree of structural change in the manufacturing sector and its importance for productivity growth he then discusses conditions for economic growth and catch up and reviews the role of industrial and technology policies in the promotion of industrial development in asia

this book examines the extent to which spatial economic convergence has taken place in the european union and analyses the effectiveness of regional policy the authors examine the differing economic features of the european regions and provide an institutional background to regional policy at both the national and union level theories of economic growth are discussed and assessed in terms of the relative performance of regional economies in europe the authors then analyse the extent to which economic convergence for example in terms of income and employment has materialized across regions using a variety of techniques including mean reversion and time varying parameter procedures the analysis is both at the level of the entire eu area and at more disaggregate levels that look at specific regions of the union and at specific sectors the book offers an assessment of some of the key regional policy instruments used and pays particular attention to the role of infrastructure investment as a tool for enhancing regional growth it also considers the extent to which some non regional specific policies impact upon the development of regional economies and explores the implications of closer monetary ties between member states this book will be of interest to academics and policymakers concerned with regional science european studies and macroeconomics
