a new york times best selling call to arms from nobel prize winning economist paul krugman the great recession is more than four years old and counting yet as paul krugman points out in this powerful volley nations rich in resources talent and knowledge all the ingredients for prosperity and a decent standard of living for all remain in a state of intense pain how bad have things gotten how did we get stuck in what now can only be called a depression and above all how do we free ourselves krugman pursues these questions with his characteristic lucidity and insight he has a powerful message for anyone who has suffered over these past four years a quick strong recovery is just one step away if our leaders can find the intellectual clarity and political will to end this depression now

there is a widespread view that world payments imbalances can be remedied through increased demand in surplus countries and reduced demand in deficit countries without any need for real exchange rate changes in fact shifts in demand and real exchange rate adjustment are necessary couplets not substitutes the essential reason for this complementarity is that a much higher fraction of a marginal dollar of us than of foreign spending falls on us output as a result a redistribution of world spending away from the us leads to an excess supply of us goods unless accompanied by a decline in their relative price although some economists believe that the integration of world capital markets somehow eliminates this problem this is a fallacy that confuses accounting identities with behavior the paper also addresses a number of related issues such as the role of budget deficits in determining domestic demand and the effectiveness of nominal exchange rates changes in producing real depreciation

the self organizing economy in the last few years the concept of self organizing systems complex systems in which randomness and chaos seem spontaneously to evolve into unexpected order has linked together researchers in many fields from artificial intelligence to

chemistry from evolution to geology now leading economist paul krugman shows how principles that explain the growth of hurricanes and embryos can also explain the formation of cities and business cycles how the same principles of order from random growth can explain the strangely simple rules that describe the sizes of earthquakes meteorites and metropolitan areas weaving together strands from many disciplines from location theory to biology the self organizing economy offers a surprising new view of how the economy structures itself in space and time

the same unique voice that made paul krugman a widely read economist is evident on every page of microeconomics the product of the partnership of coauthors krugman and robin wells the book returns in a new edition the new edition is informed and informative solidly grounded in economic fundamentals yet focused on the realities of today s world and the lives of students it maintains the signature krugman wells story driven approach while incorporating organizational changes new content and features and new media and supplements
