this book interrogates the current reputation of psychology both as an industry and as part of the academy it disputes psychology s claim to be a science questions its claims to effectiveness and examines relationships with other disciplines and fields just as psychology s role in the design of addictive gaming machines has been underplayed so too has the conservative aspect of its regulation of normality and pathology the discipline of psychology affects our understanding of identity and subjectivity to position the self as amoral and disconnected this book questions this assumption and more generally the received status of psychology

we start life with a breath and the process continues automatically for the rest of our lives because breathing continues on its own without our awareness it does not necessarily mean that it is always functioning for optimum mental and physical health the opposite is true often the problem with breathing is that it seems so easy and natural that we rarely give it a second thought we breathe we inhale we exhale what could be simpler but behind that simple act lies a process that affects us profoundly it affects the way we think and feel the quality of what we create and how we function in our daily life breathing affects our psychological and physiological states while our psychological states affect the pattern of our breathing for example when anxious we tend to hold our breath and speak at the end of inspiration in a high pitched voice depressed people tend to sigh and speak at the end of expiration in a low toned voice a child having a temper tantrum holds his or her breath until blue in the face hyperventilation causes not only anxiety but also such a variety of symptoms that patients can go from one specialty department to another

until a wise clinician spots the abnormal breathing pattern and the patient is successfully trained to shift from maladaptive to normal breathing behavior
