the illusion of reality was conceived during my tenure as director of the newly established division of information science and technology at the national science foundation in 1979 1981 as a partial response to the need for a textbook for students both in and out of government that would provide a comprehensive view of information science as a fundamental constituent of other more established disciplines with a unity and coherence distinct from computer science cognitive science and library science although it is related to all of them driven by the advances of information technology the perception of information science has progressed rapidly today it seems well understood that information processing biological organisms and information processing electronic machines have something basic in common that may subsume the theory of computation as well as fundamental parts of physics this book is primarily intended as a text for an advanced undergraduate or a graduate introduction to information science the multidisciplinary nature of the subject has naturally led to the inclusion of a considerable amount of background material in various fields the reader is likely to find the treatment relatively oversimplified in fields with which he is familiar and perhaps somewhat heavier sailing in less familiar waters the theme of common principles among seemingly unrelated applications provides the connective tissue for the diverse topics covered in the text and i hope justifies the variable level of presentation some of the material appears here for the first time

dive into the wonders of the mind with maya illusions of mind invites you on an enchanting journey through the fascinating world of perception and consciousness meet maya a curious adventurer with a heart full of wonder and a mind ready to explore join her as she embarks on an exciting quest to unravel the mysteries of the mind from captivating visual illusions to the magical melodies of auditory tricks through captivating storytelling and playful insights this ebook introduces young minds to the fascinating world of psychology and neuroscience in a fun and engaging way as maya

this edited collection presents the latest cutting edge research in the philosophy and cognitive science of temporal illusions illusion and error have long been important points of entry for both philosophical and psychological approaches to understanding the mind temporal illusions specifically concern a fundamental feature of lived experience temporality and its relation to a fundamental feature of the world time thus providing invaluable insight into investigations of the mind and its relationship with the world the existence of temporal illusions crucially challenges the naïve assumption that we can simply infer the temporal nature of the world from experience this anthology gathers eighteen original papers from current leading researchers in this subject covering four broad and interdisciplinary topics illusions of temporal passage illusions and duration illusions of temporal order and simultaneity and the relationship between temporal illusions and the cognitive representation of time

the year 2000 the end of the millennium is this anything other than a mirage the illusion of an end like so many other imaginary endpoints which have littered the path of history in this remarkable book jean baudrillard france s leading theorist of postmodernity argues that the notion of the end is part of the fantasy of a linear history today we are not approaching the end of history but moving into reverse into a process of systematic obliteration we are wiping out the entire twentieth century effacing all signs of the cold war one by one perhaps even the signs of the first and second world wars and of the political and ideological revolutions of our time in short

we are engaged in a gigantic process of historical revisionism and we seem in a hurry to finish it before the end of the century secretly hoping perhaps to be able to begin again from scratch baudrillard explores the fatal strategies of time which shape our ways of thinking about history and its imaginary end ranging from the revolutions in eastern europe to the gulf war from the transformation of nature to the hyper reality of the media this postmodern mediation on modernity and its aftermath will be widely read

a novel contribution to the age old debate about free will versus determinism do we consciously cause our actions or do they happen to us philosophers psychologists neuroscientists theologians and lawyers have long debated the existence of free will versus determinism in this book daniel wegner offers a novel understanding of the issue like actions he argues the feeling of conscious will is created by the mind and brain yet if psychological and neural mechanisms are responsible for all human behavior how could we have conscious will the feeling of conscious will wegner shows helps us to appreciate and remember our authorship of the things our minds and bodies do yes we feel that we consciously will our actions wegner says but at the same time our actions happen to us although conscious will is an illusion it serves as a guide to understanding ourselves and to developing a sense of responsibility and morality approaching conscious will as a topic of psychological study wegner examines the issue from a variety of angles he looks at illusions of the will those cases where people feel that they are willing an act that they are not doing or conversely are not willing an act that they in fact are doing he explores conscious will in hypnosis ouija board spelling automatic writing and facilitated communication as well as in such phenomena as spirit possession dissociative identity disorder and trance channeling the result is a book that sidesteps endless debates to focus more fruitfully on the impact on our lives of the illusion of conscious will

jean baudrillard is one of the outstanding representatives both of french poststructuralism and postmodernism because of radical criticism it was not possible

for him to establish a logically coherent theoretical system the philosophical aspects of his work are specifically merged therefore into a critical asystematic fragmentarism which is the subject of this work from the critique of the political economy of the sign through critiques of rationalism reality progress truth history to the theory of simulation baudrillard s specific para concepts fatal strategy symbolic exchange seduction hyperreality pataphysics etc are constantly fragmentarily present in the development of his thought these concepts are baudrillard s attempt at disengagement from modern philosophy and his new unsystematic postmodern view of reality in general in the analysis of binary metaphysical oppositions reality simulation subject object knowledge seduction history end radical irradical nihilism metaphysics god pataphysics baudrillard is radically exclusive through the arbitrary preference of one over the other concept his ideas it is possible to conclude that these dualistic antagonisms are also paradoxically compatible in his system this compatibility is very close to the irrational mysticism of this thinker this book is a clear and lucid presentation of this unique brand of postmodernism to english speaking scholarship

the illusion of self opens the reader to challenge the perception the ego creates within the physical mind from birth we form our concept of self through ideas actions and reactions of the life experience it is a composite of all the influences of our lifetime our struggles our likes dislikes our wants and desires it continues to develop through life s challenges creating in itself the illusions of an idea of what is in reality it s all an illusion of how we observe life the illusion of self exposes these perceptions and directs the reader to consider truth and its meaning
