teams and teamwork are the heart and soul of every project this is especially true for agile teams it is not the individual performance or accomplishment that counts but that of the team just like in team sports the team succeeds and fails together the agile manifesto beedle et al 2001 puts the team at the center of interaction it states the best architectures requirements and designs emerge from self organizing teams but what does self organizing mean does self organizing mean that team building is no longer necessary and that instead the teams do this by themselves and if teams are self organizing why do so many teams and projects still fail this paper sheds light on self organizing teams it explains what

distinguishes them from manager led and self governing teams it then outlines preconditions for unleashing the power of self organizing teams and juxtaposes these preconditions with factors that can make self organizing teams an illusion it becomes evident that there is an immense promise and power of and in self organizing teams on the other hand there is no guarantee for self organizing teams to develop and sustain themselves this is particularly the case in non agile organizations under those circumstances it is important to know the common pitfalls of self organizing teams and learn to overcome them this is not an easy task the returns however are multifold and worth the investment self organizing teams can thus become a cornerstone of project success it becomes apparent that the organizational environment and culture as well as individual leadership and last but not least the motivation of the individuals and the team as a whole contribute significantly to the successful development of self organizing teams it takes time and effort to secure this setting the returns however are multifold and worth the investment
