comprehensive guide to cerebral palsy for neurologists paediatricians and postgraduates step by step coverage of condition includes chapter on probability of walking

Dr. Miller's valuable resource helps members of the medical team navigate the complexity of cerebral palsy care by explaining unfamiliar treatments that fall outside of their own disciplines. Readers also benefit from a review of current practices in their own fields, includes recommended treatment algorithms, and is designed to help improve decision making. Written in a very conversational style and illustrated with lots of color, the volume provides rehabilitational, part 1, and surgical aspects, part 2, accomplished by a CD-ROM which provides lots of case studies, including walking analysis. The most comprehensive title on this topic, written by a leading expert.

Cerebral palsy (CP) represents one of the most frequent neurological disorders in infancy and childhood. It includes brain injuries or developmental defects. According to the World Health Organization, it is a main problem of public health. It may include communication, intellectual, and motor disabilities with negative consequences on children's inclusion in daily life and caregivers' burden. Rehabilitative interventions are primarily focused on promoting self-determination and independence of individuals with CP. Postural control, gait, and motor skills are usually embedded. Additionally, one may envisage request and choice programs aimed at enhancing the child's awareness of his/her own behavior. The volume summarizes some illustrative evidence-based contributions to emphasize the effectiveness and the suitability of the adopted programs. **Stability of upper limbs and motor performance of children with CP**

**Chapter one:** The therapeutic effects of a horse riding simulator which was compared to a traditional physiotherapy on the sitting position of children with spastic CP.

**Chapter two:** The evaluation of stability in children with different forms of CP was assessed through a rehabilitative platform which was implemented.

**Chapter three:** The aforementioned experimental examinations presented between groups. Investigations furthermore, four case report studies were included. Assistive technology-based setups were used to promote an active role, constructive engagement, and positive participation of the enrolled children with CP and intellectual disabilities. The beneficial outcomes on their quality of life were considered.

**Chapter four:** Describes a microswitch-based program to enhance ambulation responses of a child with CP.

**Chapter five:** Provides a detailed illustration of such a program to support locomotion fluency.

**Chapter six:** Illustrates a cluster technology aimed at pursuing the dual goal of fostering an adaptive response and reducing a challenging behavior.

**Chapter seven:** Refers to a computerized system focused on enabling a child with CP and intellectual delays with

academic performance and communication opportunities whenever available the effects on indices of happiness and or positive participation were analyzed social validation procedures involving external raters were conducted practical features of the retained treatments were privileged clinical educational psychological and rehabilitative implications of the findings were systematically and critically discussed caregivers educators families of children with cp practitioners psychologists speech and occupational therapists medicine or psychology students and teachers may find some useful insights for both research and practice in daily life settings
