this monograph is devoted to the identification and measurement theory of costs and benefits in a fuzzy information environment the process of cost benefit analysis is presented requiring the development of real cost benefit databases and the construction of cost benefit criterion these steps are accomplished with various theoretical constructs that provide sets of self contained algorithms for application this book integrates cost benefit analysis theory of fuzzy decisions and social decisions into unified decision algorithms accessible to practitioners researchers and graduate students it features the essentials of fuzzy mathematics and algorithms in a comprehensive way exposing a multi disciplinary approach for the development of cost benefit decision making in the framework of fuzziness and soft computing

this book presents the elaboration model for the multivariate analysis of observational quantitative data this model entails the systematic introduction of third variables to the analysis of a focal relationship between one independent and one dependent variable to ascertain whether an inference of causality is justified two complementary strategies are used an exclusionary strategy that rules out alternative explanations such as spuriousness and redundancy with competing theories and an inclusive strategy that connects the focal relationship to a network of other relationships including the hypothesized causal mechanisms linking the focal independent variable to

the focal dependent variable the primary emphasis is on the translation of theory into a logical analytic strategy and the interpretation of results the elaboration model is applied with case studies drawn from newly published research that serve as prototypes for aligning theory and the data analytic plan used to test it these studies are drawn from a wide range of substantive topics in the social sciences such as emotion management in the workplace subjective age identification during the transition to adulthood and the relationship between religious and paranormal beliefs the second application of the elaboration model is in the form of original data analysis presented in two analysis journals that are integrated throughout the text and implement the full elaboration model using real data not contrived examples the text provides a step by step guide through the process of integrating theory with data analysis in order to arrive at meaningful answers to research questions

as with the first edition this textbook provides a clear introduction to the fundamental theory of structural analysis as applied to vehicular structures such as aircraft spacecraft automobiles and ships the emphasis is on the application of fundamental concepts of structural analysis that are employed in everyday engineering practice all approximations are accompanied by a full explanation of their validity in this new edition more topics figures examples and exercises have been added there is also a greater emphasis on the finite element method of analysis clarity remains the hallmark of this text and it employs three strategies to achieve clarity of presentation essential introductory topics are covered all approximations are fully explained and many important concepts are repeated
