our goal in this book is to explore some of the connections between control theory and geometric mechanics that is we link control theory with a geometric view of classical mechanics in both its lagrangian and hamiltonian formulations and in particular with the theory of mechanical systems subject to motion constraints this synthesis of topics is appropriate since there is a particularly rich connection between mechanics and nonlinear control theory while an introduction to many important aspects of the mechanics of nonholonomically constrained systems may be found in such sources as the monograph of neimark and fufaev 1972 the geometric view as well as the control theory of such systems remains largely scattered through various research journals our

aim is to provide a unified treatment of nonlinear control theory and constrained mechanical systems that will incorporate material that has not yet made its way into texts and monographs. Mechanics has traditionally described the behavior of free and interacting particles and bodies, the interaction being described by potential forces. It encompasses the Lagrangian and Hamiltonian pictures and in its modern form relies heavily on the tools of differential geometry. See, for example, Abraham and Marsden (1978) and Arnold (1989) from our own point of view. Our papers Bloch, Krishnaprasad, Marsden, and Murray (1996), Bloch and Crouch (1995), and Baillieul (1998) have been particularly influential in the formulations presented in this book. Control theory and nonholonomic systems control theory is the theory of prescribing motion for dynamical systems rather than describing *vi* preface their observed behavior.

Your blueprint to develop and manage effective co-occurring treatment programs. Sequential or parallel treatments for co-occurring disorders are much less effective than a quality co-occurring treatment program. Most mental health and substance abuse professionals know how to provide an effective program for individuals with a substance use or mental health disorder, but few are aware of the issues involved in providing services for those with dual diagnosis. Designing, implementing, and managing treatment services for individuals with co-occurring mental health and substance use disorders. Blueprints for action gives you with the tools you need to develop an effective program specific to co-occurring treatment as well as to implement and manage the program's services.
