are you looking for new ways to engage your students classroom voting can be a powerful way to enliven your classroom by requiring all students to consider a question discuss it with their peers and vote on the answer during class when used in the right way students engage more deeply with the material and have fun in the process while you get valuable feedback when you see how they voted but what are the best

strategies to integrate voting into your lesson plans how do you teach the full curriculum while including these voting events how do you find the right questions for your students this collection includes papers from faculty at institutions across the country teaching a broad range of courses with classroom voting including college algebra precalculus calculus statistics linear algebra differential equations and beyond these faculty share their experiences and explain how they have used classroom voting to engage students to provoke discussions and to improve how they teach mathematics this volume should be of interest to anyone who wants to begin using classroom voting as well as people who are already using it but would like to know what others are doing while the authors are primarily college level faculty many of the papers could also be of interest to high school mathematics teachers publisher description

online education has become a major component of higher education worldwide in mathematics and statistics courses there exists a number of challenges that are unique to the teaching and learning of mathematics and statistics in an online environment these challenges are deeply connected to already existing difficulties related to math anxiety conceptual understanding of mathematical ideas communicating mathematically and the appropriate use of technology teaching and learning mathematics online bridges these issues by presenting meaningful and practical solutions for teaching mathematics and statistics online it focuses on the problems observed by mathematics instructors currently working in the field who strive to hone their craft and share best practices with our professional community the book provides a set of standard practices improving the quality of online teaching and the learning of mathematics instructors will benefit from learning new techniques and approaches to delivering content features based on the experiences of working educators in the field assimilates the latest technology developments for interactive distance education focuses on mathematical education for developing early mathematics courses

the social and emotional needs of children have become increasingly important to educators in recent years as the impact they have on improving behaviour and promoting inclusion has become evident written in an accessible style for busy practitioners this book gives advice on creating an emotionally and socially healthy school the book shows why schools should promote emotional and social development includes practical ideas activities for those working in primary secondary schools uses a range of case studies to illustrate the impact of good practice includes inset personal review materials and audit tools

for the first time in science education the subject of multiple solution methods is explored in book form while a multiple method teaching approach is utilized extensively in math education there are very few journal articles and no texts written on this topic in science teaching multiple methods to science students in order to solve quantitative word problems is important for two reasons first it challenges the practice by teachers that one specific method should be used when solving problems secondly it calls into question the belief that multiple methods would confuse students and retard their learning using a case study approach and informed by research conducted by the author this book claims that providing students with a choice of methods as well as requiring additional methods as a way to validate results can

be beneficial to student learning a close reading of the literature reveals that time spent on elucidating concepts rather than on algorithmic methodologies is a critical issue when trying to have students solve problems with understanding it is argued that conceptual understanding can be enhanced through the use of multiple methods in an environment where students can compare evaluate and verbally discuss competing methodologies through the facilitation of the instructor this book focuses on two very useful methods proportional reasoning pr and dimensional analysis da these two methods are important because they can be used to solve a large number of problems in all of the four academic sciences biology chemistry physics and earth science this book concludes with a plan to integrate da and pr into the academic science curriculum starting in late elementary school through to the introductory college level a challenge is presented to teachers as well as to textbook writers who rely on the single method paradigm to consider an alternative way to teach scientific problem solving

includes entries for maps and atlases
