increasing agricultural productivity to meet the demands of growing population is a challenging task abiotic stresses are among the major limiting factors on agriculture the knowledge and research programmes on the physiology and molecular biology of stress tolerance are certainly helpful to counter act this negative effect to a great extent the present literature deals in detail mostly with plant responses to different abiotic stresses there have been extensive studies in the past few decades on the physiology and biochemistry

of plant responses to abiotic stress conditions in the laboratory as well as in the field however the interest has shifted to molecular biology of stress tolerance modes of installing tolerance mechanisms in crop plants microarray technology functional genomics development of high throughput proteomics would benefit and guide the physiologists molecular biologists and biotechnologists to enhance stress tolerance in plants we therefore felt very strongly that there is an immediate and urgent need for a textbook on this important topic this book would be an ideal source of scientific information to the postgraduate students research workers faculty and scientists involved in agriculture plant sciences molecular biology biochemistry biotechnology and related areas we would like to thank the authors for their interest and cooperation in this exciting venture we are grateful to jacco flipsen and noeline gibson of springer for their continuous support and technical advice in bringing out the book k v madhava rao a s raghavendra september 2005 k

the functional in the title of this book not only reflects my personal bias about neuroanatomy in brain research it is also the gist of many chapters which describe sophisticated ways to resolve structures and interpret them as dynamic entities examples are the visualization of functionally identified brain areas or neurons by activity staining or intracellular dye iontophoresis the resolution of synaptic connections between physiologically identified nerve cells and the biochemical identification of specific neurons their peptides and transmitters by histo and immunocytochemistry i personally view the nervous system as an organ whose parts continuously exchanging messages arrive at their decisions by the cooperative phenomenon of consensus and debate this view is admittedly based on my own experience of looking at myriads of nerve cells and their connections rather than studying animal behaviour or theorizing numerous structural studies have demonstrated that interneurons in the brain must receive hundreds of thousands of synapses many neurons receive inputs from several different sensory areas each input conveys a message about the external world and possibly also about past events which are stored within the central nervous system whether an interneuron responds to a certain combination of inputs may be literally a matter of debate whose outcome is decided at the post synaptic membrane a nerve cell responding to an overriding command is possibly a rare event

this two part multivolume set provides a comprehensive overview of current achievements in biomedical applications of nanotechnology including stem cell based regenerative medicine medical imaging cell targeting drug delivery and photothermal photodynamic cancer therapy new approaches in early cancer diagnosis and treatment are introduced with extensive experimental results in particular some novel materials have been synthesized with new properties that are most effective in cancer therapy some of the key issues are also addressed with these recent discoveries such as bio safety and bio degradability that are essential in the success of nano medicine an important aspect of this book set is the introduction of nanotechnology to the medical communities that are searching for new treatments of cancer it may also break the barriers between the physical and medical sciences so that more

mds will be able to appreciate the new discoveries and establishments in medical diagnosis and therapy that will allow the effective handling of major clinical issues this major reference publication will be important as the field of nanomedicine has been rapidly developing with a great deal of new information it is anticipated that the research will soon advance into the pre clinical stage therefore this reference set can serve as valuable background information for future clinical studies
