a collection of all of Vavilov's works on the origin and geography of cultivated plant species

this book consists of the proceedings of a symposium organized by the Accademia Nazionale dei Lincei, Rome. The proceedings are unusual in that it is a rare event to see archaeologists and geneticists coming together to discuss the connection between historical facts and biological phenomena. The aim of the symposium was to discuss the origin of some important cultivated plants: wheat, maize, barley, oat, legumes, and fruit trees, not only in relation to genetic mechanisms but also as a complex of historical facts recognizable through archaeological research. This international meeting based on interdisciplinary concepts met with a prompt and positive reaction from all those specialists invited to attend. The book itself is an unparalleled contribution to the interdisciplinary knowledge on the origin of crop plants and agriculture.

origins of agriculture and plant domestication, cradles of agriculture and centres of diversity, species with a not identified centre

area of origin is included for each species
