the universe is considered an expansive informational field subjected to a general organizational law the organization of the deployment results in the emergence of an autonomous organization of spatial and material elements endowed with permanence which are generated on an informational substratum where an organizational law is exercised at all scales the initial action of a generating informational element produces a quantity of basic informational elements that multiply to form other informational elements that will either be neutral constituting the basic spatial elements or active forming quantum elements the neutral basic elements will form the space by a continuous aggregation and will represent the substrate of the informational links allowing the active informational elements to communicate in order to aggregate and organize themselves every active element is immersed in an informational envelope allowing it to continue its organization through constructive communications the organizational law engages the active quantum elements to aggregate and produce new and more complex quantum elements then molecular elements massive elements suns and planets gravity will then be the force of attraction exerted by the informational envelopes of the aggregates depending on their mass to develop them by acquisition of new aggregates the organizational communication of the informational envelopes of all of the physical material elements on earth will enable the organization of living things with reproduction managed by communications between the informational envelopes of the elements realizing a continuous and powerful evolution
