this book on engineering chemistry has been entirely rewritten in order to make it up to date and modern both in approach and content all diagrams

have been redrawn or replaced by new ones to meet the requirements of the latest syllabi of the various universities of India. Topics like transition metals, coordination compounds, crystal field theory, gaseous and liquid states, adsorption, flame photometry, fullerenes, composites, mechanism of some typical reactions, oils and fats, soaps and detergents have been included or expanded upon. A large number of solved numerical examples drawn from various university examinations have been given at the end of the theoretical part of each chapter. Questions have been drawn from latest examinations of various universities.

This volume covers a wide array of topics related to research technology and sustainability for technology researchers and educators. Chapter 1 explores the detection of fake news in a distributed environment. Material science is covered in chapter 2, which explains the influence of MoS_2 , B_4C and graphite on the mechanical and dry sliding wear behavior of aluminum 7075 hybrid matrix composites. Chapter 3 focuses on sensors and antennas for smart sensor networks. Chapters 4 to 8 delve into various aspects of electrical and computer engineering, including induction motor condition monitoring, automatic conversion of building plans to graphs for robot navigation and analysis of defects in microscopic and electroluminescent images using AI and image processing algorithms. Chapters 9 to 16 cover topics such as missing data prediction techniques, breast cancer diagnosis on mammography, groundwater contamination, biofertilizers, organic farming and remediation using organisms. Sustainable development is a key theme in chapters 17 to 26, addressing issues like sensor-based vehicle fuel theft detection, waste management techniques, bioremediation of soil contaminated with heavy metals, sustainable agriculture practices and novel approaches in bioplastics and nanoremediation. Finally, chapters 27 to 29 touch upon renewable energy and industrial IoT, discussing research challenges in renewable energy sources, recent trends and the transformation brought about by the industrial internet of things.

This new reference book reports on research studies on sustainable water treatment and ecosystem protection strategies. It reviews new advances in pollution control and addresses the need to design greener water treatment systems to prevent water pollution from affecting ecosystems. The chapters explain the most recent practical techniques to be used for wastewater and water treatment. It also covers new insights in green technologies for a cleaner environment. More specifically, this volume describes in detail the consequences and outcome of increasing global water pollution and

analyzes precaution measures for mitigation by reporting on the latest new technological interventions for water and wastewater treatment methods the chapters identify preventive measures to overcome water pollution along with perspectives on future trends and challenges to provide a better understanding into the development of green technologies that are very important for ensuring sustainability this title also covers case studies that demonstrate practical applications and theories on water treatment and management of natural resources this valuable reference book sustainable water treatment and ecosystem protection strategies will be useful for postgraduate environmental engineering students scientists and research scholars who are engaged in development of sustainable technologies
