the series of international symposiums on mining with backfill explores both the theoretical and practical aspects of the application of mine fill with many case studies from both underground and open pit mines minefill attendees and the proceedings book audience include mining practitioners engineering students operating and regulatory professionals consultants academics researchers and interested individuals and groups the papers presented at minefill symposiums regularly offer the novelties and most modern technical solutions in technology equipment and research in that way the papers submitted for the minefill symposia represent the highest quality and level in the conference domain for the 2020 2021 edition organizers hope that the papers presented in this publication will also be received with interest by readers around the world providing inspiration and valuable examples for industry and r d research

dynamic plasticity discusses the problems encountered in the theory of dynamic deformation of plastic bodies the book describes one dimensional problems involving a single component of stress particle velocity and single spatial coordinate the propagation of longitudinal elastic plastic waves in thin rods or wires is a simple example of this problem of dynamic plasticity another one dimensional problem which has various possible transverse motions is the dynamics of extensible strings this problem is associated in

calculations dealing with cables of suspension bridges of elevator cables of electric cables the analogy with the mechanics of extensible strings can be extended to circular and rectangular membranes such as explained by Karman and Onat. Karman and Onat analyzed the propagation of transverse and longitudinal shock waves in such membranes using the Rakhmatulin theory for strings. The text also discusses axisymmetrical problems and the problems of soil mechanics when applied to soft soils. The book can prove valuable to civil engineers, structural engineers, physicists and students of mechanical engineering or industrial design.

The present volume contains contributions of internationally renowned authors to the theme of interfacing between geostatistics, geoinformation systems and spatial data base management systems. Although some progress has been made toward interfacing, there is still only little overlap between the different communities. The present volume is intended to provide a bridge between specialists working in these areas. The volume first surveys new methodological developments in geostatistics and then reports on applications in traditional areas of geo and environmental sciences and novel applications.

Selected peer reviewed papers from the international scientific conference Corrosion 2014, November 18-21, 2014, Gliwice, Poland.

Publishes original research in all branches of mechanics including aerodynamics, aeroelasticity, boundary layers, computational mechanics, constitutive modeling of materials, dynamics, elasticity, flow and fracture, heat transfer, hydraulics, impact, internal flow, mechanical properties of materials, micromechanics, plasticity, stress analysis, structures, thermodynamics, turbulence, vibration and wave propagation.

Views and attitudes towards termination of pregnancy have shown considerable evolution over the past few decades. Along with these changes has come a growing concern to adopt means and methods which could make termination easier, safer and more effective. In this evolution, termination in the second trimester in particular is notable as being responsible for a disproportionate share of the complications and adverse experiences associated with pregnancy termination. Although the almost universal shift towards earlier abortion has reduced the number of second trimester procedures as a percentage of the whole, the problems of interrupting pregnancy in the second trimester remain conspicuous. Delay in either seeking or obtaining abortion is still in many parts of the world all too frequent. Additionally, recent developments in the prenatal diagnosis of fetal malformations, alpha-fetoprotein screening programmes and changes in the pattern of and approaches to intrauterine fetal death now also place greater emphasis on the need for adequate methods of interrupting pregnancy in the second trimester. Unlike the first trimester in which vacuum aspiration is universally considered to be the method of choice, in the second trimester of pregnancy the clinician is faced with alternatives. One method may be more appropriate than another in a particular circumstance and no single method is unequivocally accepted as best. Neither do second trimester terminations form a neatly defined single category.
