luis moura and izzat darwazeh introduce linear circuit modelling and analysis applied  
to both electrical and electronic circuits starting with dc and progressing up to rf  
considering noise analysis along the way avoiding the tendency of current textbooks  
to focus either on the basic electrical circuit analysis theory dc and low frequency ac  
frequency range on rf circuit analysis theory or on noise analysis the authors combine  
these subjects into the one volume to provide a comprehensive set of the main  
techniques for the analysis of electric circuits in these areas taking the subject from a  
modelling angle this text brings together the most common and traditional circuit  
analysis techniques e g phasor analysis with system and signal theory e g the  
concept of system and transfer function so students can apply the theory for analysis  
as well as modelling of noise in a broad range of electronic circuits a highly student  
focused text each chapter contains exercises worked examples and end of chapter  
problems with an additional glossary and bibliography for reference a balance  
between concepts and applications is maintained throughout luis moura is a lecturer

in electronics at the university of algarve izzat darwazeh is senior lecturer in telecommunications at university college london previously at umist an innovative approach fully integrates the topics of electrical and rf circuits and noise analysis with circuit modelling highly student focused the text includes exercises and worked examples throughout along with end of chapter problems to put theory into practice
