finding exact solutions to many combinatorial optimization problems in business engineering and science still poses a real challenge despite the impact of recent advances in mathematical programming and computer technology new fields of applications such as computational biology electronic commerce and supply chain management bring new challenges and needs for algorithms and optimization techniques metaheuristics are master procedures that guide and modify the operations of subordinate heuristics to produce improved approximate solutions to hard optimization problems with respect to more simple algorithms they also provide fast and robust tools producing high quality solutions in reasonable computation times the field of metaheuristics has been fast evolving in recent years techniques such as

simulated annealing tabu search genetic algorithms scatter search greedy randomized adaptive search variable neighborhood search ant systems and their hybrids are currently among the most efficient and robust optimization strategies to find high quality solutions to many real life optimization problems a very large number of successful applications of metaheuristics are reported in the literature and spread throughout many books journals and conference proceedings a series of international conferences entirely devoted to the theory applications and computational developments in metaheuristics has been attracting an increasing number of participants from universities and the industry
