cryptographic protocol security analysis based on trusted freshness mainly discusses how to analyze and design cryptographic protocols based on the

idea of system engineering and that of the trusted freshness component a novel freshness principle based on the trusted freshness component is presented this principle is the basis for an efficient and easy method for analyzing the security of cryptographic protocols the reasoning results of the new approach when compared with the security conditions can either establish the correctness of a cryptographic protocol when the protocol is in fact correct or identify the absence of the security properties which leads the structure to construct attacks directly furthermore based on the freshness principle a belief multiset formalism is presented this formalism s efficiency rigorousness and the possibility of its automation are also presented the book is intended for researchers engineers and graduate students in the fields of communication computer science and cryptography and will be especially useful for engineers who need to analyze cryptographic protocols in the real world dr ling dong is a senior engineer in the network construction and information security field dr kefei chen is a professor at the department of computer science and engineering shanghai jiao tong university
