this volume contains the papers presented at safecomp 95 the 14th international conference on computer safety reliability and security held in belgirate italy 11 13 october 1995 the papers cover all the main topics which are relevant to the safety lifecycle including general guidelines legal and human aspects safety analysis formal methods design verification and validation reliability issues dependable software technology and safety related applications together they provide both a comprehensive overview of the international state of the art and also an indication of possible future directions for research in this area the resulting volume will be of interest to all those in universities research institutions industry and business who want to be well informed about computer safety reliability and security it provides a representative sample of recent research results and applications problems presented by experts from both industry and academia

architects of buildings and architects of software have more in common than most people think both professions require attention to detail and both practitioners will see their work collapse around them if they make too many mistakes it s impossible to imagine a world in which buildings get built without blueprints but it s still common for software applications to be designed and built without blueprints or in this case design patterns a software design pattern can be identified as a recurring solution to a recurring problem using design patterns for software development makes sense in the same way that architectural design patterns make sense if it works well in one place why not use it in another but developers have had enough of books that simply catalog design patterns without extending into new areas and books that are so theoretical that you can t actually do anything better after reading them than you could before you started crawford and kaplan s j2ee design patterns approaches the subject in a unique highly practical and pragmatic way rather than simply present another catalog of design patterns the authors broaden the scope by discussing ways to choose design patterns when building an enterprise application from scratch looking closely at the real world tradeoffs that java developers must weigh when architecting their applications then they go on to show how to apply the patterns when writing realworld software they also extend design patterns into areas not covered in other books presenting original patterns for data modeling transaction process modeling and interoperability j2ee design patterns offers extensive coverage of the five problem areas enterprise developers face maintenance extensibility performance system scalability data modeling business object modeling transactions process modeling messaging interoperability and with its careful balance between theory and practice j2ee design patterns will give developers new to the java enterprise development arena a solid understanding of how to approach a wide variety of architectural and procedural problems and will give experienced j2ee pros an opportunity to extend and improve on their existing experience

this volume results from the four day scientific second international east west database workshop which took place 25th 28th september 1994 in klagenfurt austria continuing a series of workshops started in kiev in 1990 lecture notes in computer science no 504 springer next generation

information system technology the aims of this workshop are twofold first to provide a forum for the presentation and in depth discussion of scientific achievements in the field of advanced databases that will effectively improve the building and use of future information systems second to establish and increase communication between research communities which were formerly separated and therefore had only rare opportunities to interact it should establish contacts between researchers from the east and from the west to make exchange of ideas possible and to trigger collaborations however it is not only political borders which change their perviousness as a result of or giving rise to new autonomies or new possibilities for interaction and collaboration the same happens with the borders between scientific areas in particular in the dynamically evolving areas of computer science databases and programming languages are integrated in object oriented databases database and information retrieval technology form together the basis for modern multimedia information systems furthermore the borders between different information systems change and allow various forms of collaboration while maintaining different degrees of autonomy heterogeneous and distributed databases are enabling technologies for these systems
