it is the greatest environmental challenge of the 21st century but what do we truly know about global climate change and what can we do about it most of the world s top scientists agree that emissions of carbon dioxide and other greenhouse gases from

human activities such as industrial processes fossil fuel combustion and land use changes are causing the earth to get warmer impacts of this warming may include damage to our coastal areas accelerated rates of species loss altered agricultural patterns and increased incidences of infectious diseases the effects of climate change and efforts to mitigate climate change could also have substantial economic ramifications the book presents the latest research and analysis from prominent scientists economists academics and policy makers including tom wigley and joel smith who along with other authors of the science and impacts chapter explain the basic science of climate change the growing evidence that human activities are changing our climate and the impacts of these changes eileen claussen john gummer henry lee and other authors of the global strategies chapter who describe what nations are or are not doing to address climate change and the state of international climate talks robert stavins john weyant ev ehrlich and other economists who explain why economic analyses of climate policy are conducted why the projected costs of addressing climate change vary so widely among economic models and how changes driven by today's economy can influence climate policy gov jean shaheen and other authors of the innovative solutions chapter who describe what state and local governments in the united states and multinational companies are doing to monitor and curb greenhouse gas emissions and forest reinhardt who offers business leaders advice on steering their companies on a path that is healthy for business as well as the global climate this publication has also been published in paperback please [click here](#) for details

interest in economics is at an all time high among the challenges facing the nation is an economy with rapidly rising unemployment failures of major businesses and industries and continued dependence on oil with its wildly fluctuating price economists have dealt with such questions for generations but they have taken on new meaning and significance tackling these questions and encompassing analysis of traditional economic theory and topics as well as those that economists have only more recently addressed 21st century economics a reference handbook is a must have reference resource key features provides highly readable summaries of theory and models in key areas of micro and macroeconomics helpful for students trying to get a big picture sense of the field includes introductions to relevant theory as well as empirical evidence useful for readers interested in learning about economic analysis of an issue as well for students embarking on research projects features chapters focused on cutting edge topics with appeal for economists seeking to learn about extensions of analysis into new areas as well as new approaches presents models in graphical format and summarizes empirical evidence in ways that do not require much background in statistics or econometrics so as to maximize accessibility to students

over recent years nature based solutions nbs have gained popularity as tools to ameliorate the effects of climate change while slowing down the global warming process more specifically the potential of nbs has been explored in terms of meeting greenhouse gas emissions targets and fostering climate change adaptation nbs are methods that use and enhance nature to improve social and environmental challenges they involve several multifaceted actions that work sustainably to restore and protect the natural environment while helping people therefore these solutions are useful in climate change adaptation and mitigation there are 3 main areas which nbs may target namely reducing exposure reducing sensitivity and supporting adaptive capacity reducing exposure refers to protecting areas from existing climate change effects there is thus a perceived need to document and promote experiences related to nbs and to apply these in different contexts it is against this background that the

handbook of nature based solutions to mitigation and adaptation to climate change is being produced the publication will showcase experiences related to nbs from around the world in particular it will gather examples of projects studies and the latest thinking on nbs which can serve the purpose of inspiring and fostering further works in this key area thanks to its scope and thematic diversity the book will be of special interest to representatives from government organisations researchers and students from a wide range of natural and social sciences courses it will also provide useful information to practitioners and representatives from non governmental organisations

accessibility to clean and sufficient water resources for agriculture is key in feeding the steadily increasing world population in a sustainable manner nature based solutions nbs offer a promising contribution to enhance availability and quality of water for productive purposes and human consumption while simultaneously striving to preserve the integrity and intrinsic value of the ecosystems implementing successful nbs for water management however is not an easy task since many ecosystems are already severely degraded and exploited beyond their regenerative capacity furthermore ecosystems are large and complex and the many stakeholders involved may have conflicting interests hence implementation of nbs requires a structured and comprehensive approach that starts with the valuation of the services provided by the ecosystem the whole set of use and non use values in monetary terms provides a factual basis to guide the implementation of nbs which is ideally based on transdisciplinary principles i e complemented with scientific and case specific knowledge of the ecosystem in an adaptive decision making process that involves the relevant stakeholders this discussion paper evaluated twenty one nbs case studies using a non representative sample to learn from successful and failed experiences and to identify possible causalities among factors that characterize the implementation of nbs the case studies give a minor role to valuation of ecosystem services an area for which the literature is still developing guidance less successful water management projects tend to suffer from inadequate factual and scientific basis and uncoordinated or insufficient stakeholder involvement and lack of long term planning successful case studies point to satisfactory understanding of the functioning of ecosystems and importance of multi stakeholder platforms well identified funding schemes realistic monitoring and evaluation systems and endurance of its promoters

nutrient recycling habitat for plants and animals flood control and water supply are among the many beneficial services provided by aquatic ecosystems in making decisions about human activities such as draining a wetland for a housing development it is essential to consider both the value of the development and the value of the ecosystem services that could be lost despite a growing recognition of the importance of ecosystem services their value is often overlooked in environmental decision making this report identifies methods for assigning economic value to ecosystem servicesâ even intangible onesâ and calls for greater collaboration between ecologists and economists in such efforts

the book includes the author s most important work on a variety of topics including the hotelling model of spatial competition as applied to resource economics jurisdictional tax competition particularly in the context of resource taxes and environmental regulation both theoretical and empirical

the fields of insurance law and insurance economics have long and distinguished scholarly histories but participants in the two disciplines have not always communicated well across academic silos this handbook encourages more policy relevant insurance
