the public outcry for a return to moral education in our schools has raised more dust than it s dispelled building upon his provocative ideas in on becoming responsible michael pritchard clears the air with a sensible plan for promoting our children s moral education through the teaching of reasonableness pritchard contends that children have a definite but frequently untapped capacity for reasonableness and that schools in a democratic society must make the nurturing of that capacity one of their primary aims as fundamental to learning as the development of reading writing and math skills reasonableness itself he shows can be best cultivated through the practice of philosophical inquiry within a classroom

community in such an environment children learn to work together to listen to one another to build on one another's ideas to probe assumptions and different perspectives and ultimately to think for themselves advocating approaches to moral education that avoid mindless indoctrination and timid relativism. Pritchard neither preaches nor hides behind abstractions; he makes liberal use of actual classroom dialogues to illustrate children's remarkable capacity to engage in reasonable conversation about moral concepts involving fairness, cheating, loyalty, truthtelling, lying, making and keeping promises, obedience, character, and responsibility. He also links such discussions to fundamental concerns over law and moral authority, the roles of teachers and parents, and the relationship between church and state. Pritchard draws broadly and deeply from the fields of philosophy and psychology as well as from his own extensive personal experience working with children and teachers. The result is a rich and insightful work that provides real hope for the future of our children and their moral education.

This book explores the beneficial impact of pedagogically updated practices and approaches in the teaching of science concepts as well as elaborates on future challenges and emerging issues that address science and technology education by pointing out new research directions. It informs educational practices and bridges the gap between research and practice, providing information, ideas, and new perspectives. The book also promotes discussions and networking among scientists and stakeholders such as researchers, professors, students, and companies developing educational software and ICT tools. The volume presents papers from the first international conference on new developments in science and technology education (1st NDSTE) that was structured around four main thematic axes: modern pedagogies in science and technology education, new technologies in science and technology education, teaching and learning in the light of inquiry, learning methods and interest, attitude, and motivation in science.
