the authors consider the energy super critical semilinear heat equation the authors first revisit the construction of radially symmetric self similar solutions performed through an ode approach and propose a bifurcation type argument which allows for a sharp control of the spectrum of the corresponding linearized operator in suitable weighted spaces they then show how the sole knowledge of this spectral gap in weighted spaces implies the finite codimensional nonradial stability of these solutions for smooth well localized initial data using energy bounds the whole scheme draws a route map for the derivation of the existence and stability of self similar blow up in nonradial energy super critical settings

the bpb team has created a book where the use of the graphing calculator is optional but visualizing the mathematics is not by creating algebraic visual side by sides to solve various problems in the examples the authors show students the relationship of the algebraic solution with the visual often graphical solution in addition to helping students visualize the math with side by sides the authors focus on helping students make the connection between x intercepts zeros and solutions both visually and algebraically
