risk assessment has become a dominant public policy tool for making choices based on limited resources to protect public health and the environment it has been instrumental to the mission of the u s environmental protection agency epa as well as other federal agencies in evaluating public health concerns informing regulatory and technological decisions prioritizing research needs and funding and in developing approaches for cost benefit analysis however risk assessment is at a crossroads despite advances in the field risk assessment faces a number of significant challenges including lengthy delays in making complex decisions lack of data leading to significant uncertainty in risk assessments and many chemicals in the marketplace that have not been evaluated and emerging agents requiring assessment science and decisions makes practical scientific and technical recommendations to address these challenges this book is a complement to the widely used 1983 national academies book risk assessment in the federal government also known as the red book the earlier book established a framework for the concepts and conduct of risk assessment that has been adopted by numerous expert committees regulatory agencies and public health institutions the new book embeds these concepts within a broader framework for risk based decision making together these are essential references for those working in the regulatory and public health fields

this book presents the content of a year s course in decision processes for third and fourth year students given at the university of toronto a principal theme of the book is the relationship between normative and descriptive decision theory the distinction between the two approaches is not clear to everyone yet it is of great importance normative decision theory addresses itself to the question of how people ought to make decisions in various types of situations if they wish to be regarded or to regard themselves as rational descriptive decision theory purports to describe how people actually make decisions in a variety of situations normative decision theory is much more formalized than descriptive theory especially in its advanced branches normative theory makes use of mathematicallanguage mode of discourse and concepts for this reason the definitions of terms encountered in normative decision theory are precise and its deductions are rigorous like the terms and assertions of other branches of mathematics those of mathematically formalized decision theory need not refer to anything in the real i e the observable world the terms and assertions can be interpreted in the context of models of real li fe situations but the verisimilitude of the models is not important they are meant to capture only the essentials of a decision situation which in realife may be obscured by complex details and ambiguities it is these details and ambiguities however that may be crucial in determining the outcomes of the decisions

bayesian networks and decision graphs are formal graphical languages for representation and communication of decision scenarios requiring reasoning under uncertainty their strengths are two sided it is easy for humans to construct and to understand them and when communicated to a computer they can easily be compiled furthermore handy algorithms are developed for analyses of the models and for providing responses to a wide range of requests such as belief updating determining optimal strategies conflict analyses of evidence and most probable explanation the book emphasizes both the human and the computer sides part i gives a thorough introduction to bayesian networks as well as decision trees and influence diagrams and through examples and exercises the reader is instructed in building graphical models from domain knowledge this part is self contained and it does not require other background than

standard secondary school mathematics part ii is devoted to the presentation of algorithms and complexity issues this part is also self contained but it requires that the reader is familiar with working with texts in the mathematical language the author also provides a well founded practical introduction to bayesian networks decision trees and influence diagrams gives several examples and exercises exploiting the computer systems for bayesian netwrks and influence diagrams gives practical advice on constructiong bayesian networks and influence diagrams from domain knowledge embeds decision making into the framework of bayesian networks presents in detail the currently most efficient algorithms for probability updating in bayesian networks discusses a wide range of analyes tools and model requests together with algorithms for calculation of responses gives a detailed presentation of the currently most efficient algorithm for solving influence diagrams
