**Case 3 The Medical Experiment** A research team in a developing country proposes a medical experiment to test a new drug for a potentially fatal disease While the drug holds the potential to save lives the research plan involves using a placebo group which means some patients will receive no treatment

**Ethical Issues** This case raises concerns about informed consent particularly in contexts where patients may be vulnerable or have limited understanding of the research process It 3 also highlights the potential for exploitation and the need for ethical oversight in international research

**Ethical Analysis** The research team must prioritize informed consent ensuring that all participants fully understand the risks and benefits of participating in the study They should also implement measures to protect the vulnerable participants and ensure that the research adheres to the highest ethical standards
