dictionary of scientific principles presents a unique and timeless collection of almost all known rules or laws commonly called principles identified throughout the history of scientific development their definition and use exploring a broad range of disciplines the book first lists more than 2 000 principles organized in a standard alphabetical order then provides a list of subject headings for which related principles are identified a staple addition to every library the dictionary will also be of interest to scientists and general readers

this book is devoted to the problems of the growth of science these prob lems neglected for a long time by the philosophers of science have become in the 60 s and

70 s a subject of vivid discussion there are philosophers who stress only the dependence of science upon various sociological psycho logical and other factors and deny any internal laws of the development of knowledge like approaching the truth the majority rejects such nihilism and searches for the laws of the growth of science however they often overlook the role of the correspondence principle which connects the successive scientific theories on the other hand some authors while stressing the role of this principle overlook logical difficulties connected with it e g the problem of the incompatibility of successive theories of the falsity of some of their assumptions etc i believe the correspondence principle to be a basic principle of the progress of contemporary physics and probably of every advanced science how ever this principle must be properly interpreted and the above mentioned logical difficulties must be solved their solution requires as it seems revealing the idealizational nature of the basic laws of science in any case of the quantitative laws of advanced sciences this point has been recently emphasized by some polish philosophers especially in poznan
