the design and construction of buildings is a lengthy and expensive process and those who commission buildings are continually looking for ways to improve the efficiency of the process in this book the second in the building in value series a broad range of topics related to the processes of design and construction are explored by an international group of experts the overall aim of the book is to look at ways that clients can improve the value for money outcomes of their decisions to construct buildings the book is aimed at students studying in many areas related to the construction industry including architecture construction management civil engineering and quantity surveying and should also be of interest to many in the industry including project managers property developers building contractors and cost engineers

this unique book discusses programming design and building evaluation providing a joined up approach to building design by linking the functional and architectonic qualities of a building the authors show the practical implications of the utility value of buildings starting by looking at how the relationship between form and function has been dealt with by different approaches to

architecture from a historical perspective it goes on to discuss how the desired functional quality and utility value of a building can be expressed in a brief and given a physical form by the architect finally it advises on how to carry out post occupancy evaluation and provides the architect with methods and techniques for testing whether the intended utility value of a building has been achieved

the significance of research and technology in today's economies is undisputed and continues to grow designing buildings to accommodate a range of functions from laboratory experiments through prototype development to presentation and marketing is an architectural field of great potential commissioned by universities public institutes and private companies the challenge is to reconcile security and accessibility laboratories equipped with sensitive state of the art instruments and facilities for theoretical research zoning circulation and functional requirements as well as the historical development and contemporary context of research building are covered in the opening systematic chapters of this design manual following this some 70 built projects largely from europe the usa and asia are analysed according to a variety of aspects such as urban integration and communications infrastructure the authors both from the internationally renowned max planck society and contributors draw on their own substantial practical experience of planning and building research facilities

covering common problems likely failures and their remedies this is an essential on site guide to the behaviour of a building's structure presented in a clear structure and user friendly style the book goes through all the structural aspects of a building and assesses the importance of the different components it explains the structural behaviour of buildings giving some of the basics of structures together with plenty of real life examples and guidance

infra lightweight concrete combines the structural and thermal insulation functions of the building envelope in one monolithic material thus providing new design options the handbook is a practical guide to building with this new type of material the architects and structural engineers of the interdisciplinary team of authors combine their findings from many years of research including from a project in which the team investigated the architectural and structural potential of infra lightweight concrete in multi story residential buildings in addition to essential information on designing with the material including construction details and an overview of the building physics properties practical advice on building details is provided in the form of sizing tables and numerous details from various projects

to complement the critical and objective view gleaned from the study of some sixty buildings this design manual has been developed to provide a more synthetic approach to the principles which lie behind successful daylight design these principles are illustrated with examples drawn from the case study buildings the emphasis throughout has been on practical methods to improve design rather than techniques studied for any intrinsic interest the book provides the necessary tools to assist the designer to provide well daylit interiors and shows that good daylight design is not a restriction on architectural expression but on the contrary acts as an inspiration and foundation for good architecture

this one of a kind reference gathers numerous new studies examining the design of buildings in seaside locations chapters discuss design for various locations and seaside climates and include information regarding climate materials concepts of cooling and heating vegetation and micro climate and weather conditions and sustainability this book provides architects engineers builders and students with design examples and applications that will enable them to design and build comfortable cost effective and sustainable buildings in maritime zones

bringing together leading experts from the fields of architecture design engineering education and the social sciences this valuable collection presents a multidimensional understanding of the complexities and ways in which school designs influence and are influenced by educational practice moving beyond the long debated question as to whether the design of a school influences pedagogic practice chapters acknowledge the multiple and diverse ways in which teaching learning development and inclusion are impacted by the nature and quality of the physical environment considering changes in national and international policy and exploring the changing

pressures and demands on design education and schooling more broadly contributors rethink and re envision those aspects of design and educational practice in which they specialise together these chapters present a bold vision for the future conceptualisation development and use of school buildings and facilities an important contribution to debates on school design and education inclusion and pedagogy this is an essential and fascinating read for students researchers lecturers and policymakers involved in the fields of education and architecture

the industry standard guide to designing well performing buildings architectural detailing systematically describes the principles by which good architectural details are designed principles are explained in brief and backed by extensive illustrations that show you how to design details that will not leak water or air will control the flow of heat and water vapor will adjust to all kinds of movement and will be easy to construct this new third edition has been updated to conform to international building code 2012 and incorporates current knowledge about new material and construction technology sustainable design issues are integrated where relevant and the discussion includes reviews of recent built works that extract underlying principles that can be the basis for new patterns or the alteration and addition to existing patterns regulatory topics are primarily focused on the us but touch on other jurisdictions and geographic settings to give you a well rounded perspective of the art and science of architectural detailing in guiding a design from idea to reality architects design a set of details that show how a structure will be put together good details are correct complete and provide accurate information to a wide variety of users by demonstrating the use of detail patterns this book teaches you how to design a building that will perform as well as you intend integrate appropriate detailing into your designs learn the latest in materials assemblies and construction methods incorporate sustainable design principles and current building codes design buildings that perform well age gracefully and look great architects understand that aesthetics are only a small fraction of good design and that stability and functionality require a deep understanding of how things come together architectural detailing helps you bring it all together with a well fleshed out design that communicates accurately at all levels of the construction process

this book is a systematic and practical survey of contemporary museum design in theory and practice museums are architectural trend setters culture sponsoring and their increasing role as tourist attractions are guarantees for an ongoing boom in museum construction a tradition and typology developed over the centuries the planning and practical experience gained in recent decades and cutting edge technology all contribute to the practice of modern day museum building history and form site development floor plan air conditioning and climate technology are just some examples of the subjects treated systematically and contextually in the first section of this design manual some 70 international museum case studies by renowned architects such as tadao ando stephen holl renzo piano and herzog de meuron exemplify solutions and emphasize specific museum design issues such as spatial organisation and lighting

you can use this book to design a house for yourself with your family you can use it to work with your neighbors to improve your town and neighborhood you can use it to design an office or a workshop or a public building and you can use it to guide you in the actual process of construction after a ten year silence christopher alexander and his colleagues at the center for environmental structure are now publishing a major statement in the form of three books which will in their words lay the basis for an entirely new approach to architecture building and planning which will we hope replace existing ideas and practices entirely the three books are the timeless way of building the oregon experiment and this book a pattern language at the core of these books is the idea that people should design for themselves their own houses streets and communities this idea may be radical it implies a radical transformation of the architectural profession but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people at the core of the books too is the point that in designing their environments people always rely on certain languages which like the languages we speak allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence this book provides a language of this kind it will enable a person to make a design for almost any kind of building or any part of the built environment patterns the units of this language are answers to design problems how high should a window sill be how many stories should a building have how much space in a neighborhood should be devoted to grass and trees more than 250 of the patterns

in this pattern language are given each consists of a problem statement a discussion of the problem with an illustration and a solution as the authors say in their introduction many of the patterns are archetypal so deeply rooted in the nature of things that it seemly likely that they will be a part of human nature and human action as much in five hundred years as they are today

today s design professionals are faced with challenges on all fronts they need not only to keep in step with rapid technological changes and the current revolution in design and construction processes but to lead the industry this means actively seeking to innovate through design research raising the bar in building performance and adopting advanced technologies in their practice in a constant drive to improve design processes and services how is it possible to implement innovations and moreover to assimilate them in such a way that design methods and technologies remain fully integrated focusing on innovations in architecture this book covers new materials and design methods advances in computational design practices innovations in building technologies and construction techniques and the integration of research with design moreover it discusses strategies for integrating innovation into design practices risks and economic impacts through numerous case studies it illustrates how innovations have been implemented on actual architectural projects and how design and technical innovations are used to improve building performance as well as design practices in cutting edge architectural and engineering firms projects of all scales and building types are discussed in the book ranging from small scale installations academic and commercial buildings to large scale mixed use healthcare civic academic scientific research and sports facilities work from design firms around the globe and of various scales is discussed in the book including for example asymptote architecture cepezed co architects consarc architects faab architektura gerber architekten hok idom acxt mad architects morphosis architects sda synthesis design architecture studiotrope perkins will richter dahl rocha associés snøhetta rob ley studio trahan architects unstudio and zaha hadid architects among many others

this work for building design and management professionals aims to prepare them to deal with the growing expectations and demands of building users and providing opportunities for them to extend their services it includes case studies to illustrate the points made

color in architecture design methods for buildings interiors and urban spaces addresses every aspect of color planning and application going far beyond a theory based textbook approach to the subject matter linton draws on over 200 real world examples from an international cast of professional colorists case studies of various design challenges and solutions are presented in an easy to understand workshop format each of these studies let you dig a little deeper giving you significant insight into the practices of professional color designers and illustrating how to clarify the planning concepts capitalize on the visual properties of color and select from the range of industrial materials available for both interior and exterior building surfaces book jacket title summary field provided by blackwell north america inc all rights reserved

a building can be defined as a structure which has a roof and walls the architectural technical and engineering applications for designing buildings is referred to as building design zoning requirement investigation of the environmental impact of construction budgeting scheduling logistics inconvenience to the public construction site safety etc are some of the considerations involved in design and execution the construction of building is carried out differently for residential and non residential or commercial setups it involves the principal areas of planning design and financing the topics included in this book on building design and construction systems are of the utmost significance and bound to provide incredible insights to readers it explores all the important aspects of these fields in the present day scenario it will serve as a reference to structural engineers building designers architects and students

since the appearance of the first edition of energy simulation in building design the use of computer based appraisal tools to solve energy design problems within buildings has grown rapidly a leading figure in this field professor joseph clarke has updated his book throughout to reflect these latest developments the book now includes material on combined thermal lighting and cfd simulation advanced glazings indoor air quality and photovoltaic components this thorough revision means that the book remains the key text on simulation for architects building

engineering consultants and students of building engineering and environmental design of buildings the book's purpose is to help architects, mechanical, environmental engineers and energy facility managers to understand and apply the emerging computer methods for options appraisal at the individual building, estate, city, region and national levels. This is achieved by interspersing theoretical derivations relating to simulation within an evolving description of the built environment as a complex system. The premise is that the effective application of any simulation tool requires a thorough understanding of the domain it addresses.

Structural design of buildings fundamentals in design management and sustainability is essential reference for all structural engineers designing buildings and other structures. The book forms part of the structural design of buildings series covering key issues that design professionals face at the outset of a project.
