this volume contains the research papers presented at the international conference on automated reasoning with analytic tableaux and related methods tableaux 2005 held september 14 17 2005 in koblenz germany

these proceedings of the 15th international conference on wear of materials focus on the friction and wear of materials in various applications under different environments from the nanometer scale to the meter scale the conference provides a unique international forum for researchers and practitioners from different disciplines to exchange latest results coverage includes wear assessment and monitoring wear modeling mechanisms mapping and prediction wear corrosion testing and control surface engineering for wear and wear corrosion control development of new wear test methods and wear test methodologies wear of materials for biomedical applications wear of non equilibrium materials from atomic dimensions to the micro scale wear of hard and superhard materials wear of materials in the earthmoving minerals processing and mining industries

one of the most striking properties of biological systems is their ability to learn and adapt to ever changing environmental conditions tasks and stimuli it emerges from a number of different forms of plasticity that change the properties of the computing substrate mainly acting on the modification of the strength of synaptic connections that gate the flow of information across neurons plasticity is an essential ingredient for building artificial autonomous cognitive agents that can learn to reliably and meaningfully interact with the real world for this reason the neuromorphic community at large has put substantial effort in the design of different forms of plasticity and in putting them to practical use these plasticity forms comprise among others short term depression and facilitation homeostasis spike frequency adaptation and diverse forms of hebbian learning e g spike timing dependent plasticity this special research topic collects the most advanced

developments in the design of the diverse forms of plasticity from the single circuit to the system level as well as their exploitation in the implementation of cognitive systems
