excerpt from charles darwin evolution by natural selection my introduction to the name of darwin took place nearly sixty years ago in paris where i used to be taken from my home in the rue de la paix to play in the gardens of the tuileries on the way in the rue saint honor near the corner of the rue de castiglione was a shop that called itself articles pour chz ens and sold dog collars harness leads raincoats greatcoats with little pockets for handkerchiefs and buttoned boots made of india rubber the pair for fore paws larger than the pair for hind paws one day this heavenly shop produced a catalogue and although i have long since lost it i remember its introduction as vividly as if i had it before me it began on sait depuis darwin que nous descendons des singes ce qui nous fait encore plus aimer nos chiens i asked qu est ce que ca veut dire darre vingt my father came to the rescue and told me that darwin was a famous englishman who had done something or other that meant nothing to me at all but i recollect that because darwin was english and a great man it all fitted perfectly into my pattern of life which was built on the principle that if anything was english it must be good i have learnt better since then but darwin at any rate has never let me down

on the origin of species published in 1859 is widely accepted as the seminal work in modern biology through careful observation charles darwin explains how traits can be selected for within a population this is easily observed in the artificial selection of farm animals for instance darwin s theory caused an uproar that can still be heard today by refuting the christian doctrine of created breeds in which all species that exist now have always existed just as they are it is the very publication of this work that gave charles darwin his place of prominence in the history of the theory of evolution because while he was not the first to suggest such a mechanism his book and its exhaustive studies made the information widely available english scientist naturalist and geologist charles darwin 1809 1882 revolutionized science especially biology with his theory of evolution through natural selection as a passenger aboard the beagle darwin became intrigued by the existence of different species in different geographical locations which aided in the development of his theory in addition to the origin of species he is also remembered for the descent of man and selection in relation to sex and the expression of the emotions in man and animals
