winner of the 2003 shingo prize reorganizing work processes into cells has helped many organizations streamline operations shorten lead times increase quality and lower costs cellular manufacturing is a powerful concept that is simple to understand however its ultimate success depends on deciding where cells fit into your organization and then applying the know how to design implement and operate them reorganizing the factory presents a thoroughly researched and comprehensive life cycle approach to competing through cellular work organizations it takes you from the basic cell concept and its benefits through the process of justifying designing implementing operating and improving this new type of work organization in offices and on the factory floor the book discusses many important technical dimensions such as factory analysis cell design planning and control systems and principles for lead time and inventory reduction however unique to the literature it also covers in depth the numerous managerial issues that accompany organizing work into cells in most implementations performance measurement compensation education and training employee involvement and change management are critically important these issues are often overlooked in the planning process yet they can occupy more of the implementation time than do the technical aspects of cells includes why do cells improve lead time

quality and cost planning for cell implementation justifying the move to cells strategically and economically designing efficient manufacturing and office cells selecting and training cell employees compensation system for cell employees performance and cost measurement planning and control of materials and capacity managing the change to cells problems in designing implementing and operating cells improving and adapting existing cells structured frameworks and checklists to help analysis and decision making numerous examples of cells in various industries
