there has long been a need for a systematic introduction to the modern pure theory of  
international trade that would take the student through a careful introduction to the tools  
of analysis and the main logical propositions into the application of the theory to practical  
problems of international economic policy trade theory should be part and parcel of price  
theory distinguished only by the fact that other countries form part of the natural  
opportunities and natural constraints that a country confronts in its efforts to bend nature  
to its desire to produce utility yielding goods and services but its exposition is often  
confused by the attachment of its expositors to obsolete problems and backward analytical  
techniques this book covers in detail classical neoclassical and modern theories of  
international trade with special attention to problems of equilibrium growth and welfare  
and discusses the work of all major contributors in this field from Ricardo and Mill  
through Meade Heckscher and Ohlin to the growth models of Johnson Solow and Uzawa all  
problems are clearly stated and the easiest and most convenient solutions are sought in  
each case with the more technical topics in the field discussed in several chapters and  
appendixes that may be omitted for less advanced students without interrupting the  
continuity of the book the book's coverage is complete and entirely up to date it is  
written primarily for advanced undergraduate and graduate courses in international trade
