provides a comprehensive introduction to the major issues and activities that constitute urban and regional planning in Australia today

this hard hitting account of the failure of urban planning in three major Australian cities applies worldwide and has been an international success a new preface illustrates that the mistakes of the past continue with a vengeance

provides the first national account of the historical impact of urban planning and design on the Australian landscape it defines and documents hundreds of places parks public spaces redeveloped precincts neighbourhoods suburbs up to whole towns that contribute to the character of urban and suburban Australia

this is a most welcome revival of the critical planning tradition the authors combine a skilful mix of theory and applied analysis to reveal the complex dynamics of this exciting field I can think of no better text on cities governance and the role of the planner associate professor Mark Considine University of Melbourne co-author of *Australian Politics in the Global Era* a useful book because it makes clear connections between politics and policy in general and the roles of planners it raises serious questions on how the move to market economies conflicts with the older idea of intervention via planning and challenges the reader to rethink planning in newer contexts the book is an excellent introduction to both urban planning

theories and their relationship to wider political cultures. Eva Cox, policy analyst and author of *A Truly Civil Society*, new challenges show how Australia's cities should be managed in the new millennium. How can planning respond to the new political challenges which confront every level of government? Does planning complement or inhibit environmental sustainability? Australian urban planning addresses these questions by describing and analysing the various theoretical, political and institutional forces that have shaped and continue to reshape public urban planning in Australia since the second world war. Australian urban planning explains the historical origins of planning and the nature of the diverse recent changes that have both reshaped and threatened its original purposes. It presents planning as a form of urban governance in which spatial regulation reflects such competing claims as economic growth, social justice, global economic transformation and ecological sustainability. Australian urban planning consists of three parts. The first part presents a rich account of what has happened to Australian cities and their management over the last two decades. The second surveys the most significant ideas that have informed planning theory over that period and demonstrated the many impacts those ideas have had. The final part sets an agenda for the future of urban governance.

Winner of the Planning Institute of Australia's 2015 Cutting Edge Research and Teaching Award, Australians from all walks of life have begun to realise the nation's cities cannot sustain profligate growth indefinitely. Dwindling water supplies, failing food bowls, increased energy costs, more severe bushfires, severe storms, flooding, coastal erosion, rising transport expenses, housing shortages and environmental pollution are now daily news headlines. Australia's cities may have reached their ecological limits. A new model for planning the places we live is needed. Understanding the natural cycles of the city is just as important to planning our cities as knowledge of local ordinances. Indeed, much more so. A profound knowledge of environmental processes is critical for successful planning in today's world. Environmental planners take as their guiding principle the concept of designing with nature, approaching cities as living organisms that consume water, energy and raw materials and produce waste. This metabolic view of cities means we can find new solutions to old problems and steer our cities towards a more sustainable form of planning. Written specifically for students and professionals working in city planning in Australia, this ground-breaking new book enables Australian planners, architects and developers to get a better understanding of the fundamental principles of environmental planning for cities, showing how land, water, air, energy, wildlife and people shape our built environments and how, in turn, environmental processes must be better understood if we are to make informed decisions about developing cities that are more sustainable. The book's coverage is comprehensive, from an overview of the concepts and theories of environmental planning through analysis of governance systems and urban environmental processes to agendas and policies for the future. All the key topics are covered in depth, with recommendations for supporting reading and an unrivalled selection of additional materials. Ideal for students, essential for professionals, *Australian Environmental Planning* is vital reading for more sustainable cities in a more sustainable world.

in recent years many nations have asked why not enough housing is being built or when it is built why it isn't of the highest quality or in the best most sustainable locations politics planning and housing supply in australia england and hong kong examines the politics and planning of new homes in three very different settings but with shared political traditions in australia in england and in hong kong it investigates the power relationships and politics that underpin the allocation of land for large scale residential schemes and the processes and politics that lead to particular development outcomes using a comparative framework it asks how different systems of urban governance and planning mediate the supply of land for housing whether and how these system differences influence the location quantity and price of residential land and the implications for housing outcomes what can be learned from these different systems for allocating land building consensus between different stakeholders and delivering a steady supply of high quality and well located homes accessible to and appropriate for diverse housing needs this book frames each case study in a comprehensive examination of national and territorial frameworks before dissecting key local cases these local cases urban renewal and greenfield growth centres in australia new towns and strategic sites in england and major development schemes in hong kong explore how broader urban planning and housing policy goals play out at the local level while the book highlights a number of potential strategies for improving planning and housing delivery processes the real challenge is to give voice to a broader array of interests reconstituting the political process surrounding planning and housing development to prioritise homes in well planned places for the many rather than simply facilitating investment opportunities for the few
