an introduction to the software package delta description language for taxonomy is given the contribution consists of step by step instructions into the delta editor and the interactive identification program intkey it describes how to record taxonomic character information in a database and maintain these data standard output functions are simplified in a new starter database all used commands are commented and it is marked where changes in the command files are required the paper explains how to generate text descriptions interactive identification tools and how to make keys and species diagnoses

the book is aimed to be a treatise on the systematic pomology the primary component of science of fruits dealing with identification nomenclature and classification of fruit species based on the descriptions of characteristics related to their morphological genetical physiological biochemical

biotechnological and eco attributes besides taxonomic narrative of each species under the respective orders and genera considerable emphasis has been laid on cultivars the treatment is based on the latest version of nomenclature and phylogenetic system of classification apg iii the book is richly illustrated with diagrams and colour plates and carries fairly exhaustive bibliography and glossary thus the book is of high academic value for research workers teachers students and anyone interested in advanced fruit culture to provide insight in identifying and classifying fruit plants providing standard nomenclature and terminology in avoiding the confusion from synonymy and promoting correct labeling to understand their genetic relations in establishing or maintaining a garden a germplasm bank a research orchard or even herbaria in identification of new genotypes or cultivars for introduction and in deciding orchard management practices as well as methods of utilization in using the correct related cultivars kept in a genetic resources repository for improvement considering the limits of hybridization and in selecting genetic material for a breeding programme considering their taxonomic proximities and specific characters related to fruit bearing regularity nutritive and edible quality resistance to biotic and abiotic stresses and plant stature and form

superb illustrations and explanations help readers classify and study plant features and plant families

australia is home to more than 240 species of frogs many of which cannot be found anywhere else in the world the photographic field guide to australian frogs provides readers with the tools to confidently identify 242 species and five recognised subspecies it includes detailed information on the distribution habitat preferences and call of each frog species as well as fully illustrated keys to genera to assist with identification multiple photographs of each species show variation in colour and pattern as well as features used for identification such as thigh colouration skin texture belly colour and patterning eye colour and extent of webbing between the toes with a strong focus on illustrating variation and key diagnostic features this guide will enable frog enthusiasts environmental professionals and research scientists to identify australian frog species with a high level of confidence certificate of commendation the royal zoological society of nsw 2022 whitley awards zoology field guide

the book strikes a balance between classical fundamental information and the recent developments in plant systematics special attention has been devoted to the information on botanical nomenclature identification and phylogeny of angiosperms with numerous relevant examples and detailed explanation of the important nomenclatural problems an attempt has been made to present a continuity between orthodox and contemporary identification methods by working on a common example the methods of identification using computers have been further explored to help better online identification the chapter on cladistic methods has been totally revised and molecular systematics discussed in considerable detail jacket

mycology the study of fungi originated as a subdiscipline of botany and was a descriptive discipline largely neglected as an experimental science until the early years of this century a seminal paper by blakeslee in 1904 provided evidence for self incompatibility termed heterothallism and stimulated interest in studies related to the control of sexual reproduction in fungi by mating type specificities soon to follow was the demonstration that sexually reproducing

fungi exhibit mendelian inheritance and that it was possible to conduct formal genetic analysis with fungi the names burgetf kniep and lindegren are all associated with this early period of fungal genet ics research these studies and the discovery of penicillin by fleming who shared a nobel prize in 1945 provided further impetus for experimental research with fungi thus began a period of interest in mutation induction and analysis of mutants for biochemical traits such fundamental research conducted largely with neurospora crassa led to the one gene one enzyme hypothesis and to a second nobel prize for fungal research awarded to beadle and tatum in 1958 fundamental research in biochemical genetics was extended to other fungi especially to saccharomyces cerevisiae and by the mid 1960s fungal systems were much favored for studies in eukaryotic molecular biology and were soon able to compete with bacterial systems in the molecular arena
