The impact of economic geography both within and beyond the wider field of geography has been constrained in the past by its own limitations. Drawing together the work of several eminent geographers, this superb collection assesses the current state of knowledge in the sub-discipline and its future direction. In doing so, the contributors show how economic geographers have offered explanations that affect places and lives in the broader context of the global economy, offering a discussion of theoretical constructs and methodologies with the purpose to show the need to combine different approaches in understanding spatial interdependencies. Contributors also demonstrate the need to engage with multiple audiences and within this context they proceed to examine how geographers have interfaced with businesses and policy. This excellent collection moves economic geography from a preoccupation with theory towards more rigorous empirical research with greater relevance for public policy. With excellent breadth of coverage, it provides an outstanding introduction to research topics and approaches.

In the context of great economic turmoil and uncertainty, the emergent conflict between continued globalisation and growing economic nationalism means that a geographical economic perspective has never been so important. human existence

the uneven geographical distribution of economic activities is a huge challenge worldwide and also for the European Union in Krugman's new economic geography. Economic systems have a simple spatial structure. This book shows that more sophisticated models should visualise the EU as an evolving trade network with a specific topology and different aggregation levels. At the highest level, economic geography models give a bird's-eye view of spatial dynamics. At a medium level, institutions shape the economy and the structure of financial and labour markets. At the lowest level, individual decisions interact with the economic, social, and institutional environment. The focus is on firms' decision on location and innovation. Such multilevel models exhibit complex dynamic patterns, path dependence, cumulative causation, hysteresis, on a network structure, and specific analytic tools are necessary for studying strategic interaction, heterogeneity, and nonlinearities.
