the purpose of this research topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research the term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc in all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal in fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require

learning from the richest combinations of cross modal information in contrast even the very best systems in artificial intelligence ai and robotics have taken only tiny steps in this direction building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of ai yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap we anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration by focusing on cross modal learning the proposed research topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience

the papers of jacob marschak which follow in these volumes are an extraordinary combination of original and fruitful departures in economic and social thought superb clarity of exposition and sensitivity to the values of earlier work and even competing traditions they make us marvel alike at their variety their quantity and their quality but they do not even so fully reflect marschak s contributions to the development of social science he has had an unusual influence as one who exercises leadership in a formal organizational sense this role has been manifest in his capacity as director of the cowles commission for research in economics then at the university of chicago in that organization s most productive and influential period and later in his central role in the western management science institute at the university of california at los angeles i can speak from first hand knowledge about the first his special capacities are first the recognition of promising new concepts and of promising young scholars and second getting his colleagues to join him in developing the ideas and involving them fully in the necessary tasks there was an unusual combination of strength and humility in his methods a display of force in pushing the work along but a willingness almost an insistence on treating even the most junior associate as a fully equal colleague in intellectual development whose criticism of himself was to be encouraged his leadership has been exercised in the absence of formal positions
