it s history with the nasty bits left in want to know how to be very rude without anybody knowing some murky medieval jokes what to say if someone calls you mundungus hackum or jabbernowl get your revenge with some really wicked words even english teachers will be speechless

the symposium on vertical reference systems veres was initiated on the occasion of the xxii general assembly of the international union of geodesy and geophysics iugg birmingham 1999 by professor dr wolfgang torge past president of the international association of geodesy lag and representative of lag to the pan american institute of geography and history paigh the idea was to organise another joint symposium of lag and paigh like the previous one held during the xx iugg general assembly at vienna austria in 1991 good reasons for such a joint symposium were the great success and the ongoing activities of the project on the south american geocentric reference system sistema de referencia geocentrico para america del sur sirgas being sponsored by lag and paigh since 1993 the sir gas project working group i had presented a continental south american reference frame of 58 stations during the lag scientific assembly at rio de janeiro in 1997 this reference frame was already adopted by several south american countries as the basis for their new national horizontal geodetic datums sirgas working group ii to overcome the problems of the heterogeneous vertical height datums between the individual countries sirgas had installed its working group iii vertical datum in 1997 as the discussion on the unification of vertical reference systems is also going on in lag and other bodies of science and practice it was decided to dedicate the symposium to this topic

just as in the era of great achievements by scientists such as newton and gauss the mathematical theory of geodesy is continuing the tradition of producing exciting theoretical results but today the advances are due to the great technological push in the era of satellites for earth observations and large computers for calculations every four years a symposium on methodological matters documents this ongoing development in many related underlying areas such as estimation theory stochastic modelling inverse problems and satellite positioning global reference systems this book presents developments in geodesy and related sciences including applied mathematics among which are many new results of

high intellectual value to help readers stay on top of the latest happenings in the field

in this volume the state of the art in geodesy is presented with special emphasis on the challenges of the next decade it is subdivided into six parts the first five parts discuss the challenges of providing a stable global reference at the parts per billion level by space methods the impact of recently approved dedicated satellite missions on the determination of a high resolution global gravity field and its refinements by airborne gravity advances in geodynamics and their impact on the monitoring of seismic hazards and earthquake prediction the increasing use of gps and ins in kinematic mode for mapping the earth s surface and monitoring the behaviour of large man made structures and the related advances in mathematical theory and numerical techniques the last part is dedicated to the discussion of a new structure for iag to meet these challenges

this paper examines possible stratigraphic linkages across the central wabigoon subprovince in north west ontario based on a revised interpretation of the obonga greenstone belt after a review of previous mapping interpretations the paper presents information on stratigraphy structure and on lithologies in the various zones or assemblages of the obonga belt and discusses outstanding research issues to be resolved finally possible correlations among the obonga sturgeon savant and onaman tashota belts are explored

this volume represents the proceedings of the international symposium on gravity geoid and space missions ggsm2004 held in porto portugal 30 august 3 september 2004 the symposium encompassed the themes of commission 2 gravity field of iag as well as interdisciplinary topics related to geoid and gravity field including integration of heterogeneous data and contributions from satellite and airborne techniques special focus was on gravity dedicated satellite missions like champ grace and goce projects addressing topographic and ice field mapping using sar lidar and laser altimetry as well as missions and studies related to planetary geodesy were also covered
