recent progress in enzyme immobilisation enzyme production coenzyme regeneration and enzyme engineering has opened up fascinating new fields for the potential application of enzymes in a large range of different areas as more progress in research and application of enzymes has been made the more apparent has become the lack of an up to date overview of enzyme molecular properties the need for such a data bank was also expressed by the ec task force biotechnology and information therefore we started the development of an enzyme data information system as part of protein design activities at gbf the present book enzyme handbook represents the printed version of this data bank In future it is also planned to make a computer searchable version available the enzymes in the handbook are arranged according to the 1984 enzyme commission list of enzymes and later supplements same 3000 different enzymes are covered frequently very different enzymes are included under the same ec number although we intended to give a representative overview on the molecular variability of each enzyme the handbook is not a compendium the reader will have to go to the primary literature for more detailed information naturally it is not possible to cover all numerous up to 40 000 literature references for each enzyme if data representation is to be concise as is intended
