theoretical and practical tools to master matrix code design strategy and technique error correcting and detecting codes are essential to improving system reliability and have popularly been applied to computer systems and communication systems coding theory has been studied mainly using the code generator polynomials hence the codes are sometimes called polynomial codes on the other hand the codes designed by parity check matrices are referred to in this book as matrix codes this timely book focuses on the design theory for matrix codes and their practical applications for the improvement of system reliability as the author effectively demonstrates matrix codes are far more flexible than polynomial codes as they are capable of expressing various types of code functions in contrast to other coding theory publications this one does not burden its readers with unnecessary polynomial algebra but rather focuses on the essentials needed to understand and take full advantage of matrix code constructions and designs readers are presented with a full array of theoretical and practical tools to master the fine points of matrix code design strategy and technique code designs are presented in relation to practical applications such as high speed semiconductor memories mass memories of disks and tapes logic circuits and systems data entry systems and distributed storage systems new classes of matrix codes such as error locating codes spotty byte error control codes and unequal error control codes are introduced along with their

applications a new parallel decoding algorithm of the burst error control codes is demonstrated in addition to the treatment of matrix codes the author provides readers with a general overview of the latest developments and advances in the field of code design examples figures and exercises are fully provided in each chapter to illustrate concepts and engage the reader in designing actual code and solving real problems the matrix codes presented with practical parameter settings will be very useful for practicing engineers and researchers references lead to additional material so readers can explore advanced topics in depth engineers researchers and designers involved in dependable system design and code design research will find the unique focus and perspective of this practical guide and reference helpful in finding solutions to many key industry problems it also can serve as a coursebook for graduate and advanced undergraduate students

codes regulations and standards in interior design shows interior design students and practitioners how to make the incorporation of code requirements an integral part of their design process the text develops a clear understanding of the reasons for the history of the meaning and application of and the enforcement of applicable codes regulations and standards to real problems in interior design hurt instills in students that codes regulations and standards are not necessary evils but are there to assist them as designers in understanding and applying the principles of life safety and property protection both of which are important and integral goals in any design project the text covers the most current reference documents available today primarily the 2009 series of model codes from the international code council

the capacity of wireless data communications is lagging behind demands due to unsatisfactory performance of the existing wireless networks such as low data rates low spectral efficiency and low quality of service space time coding is an effective transmit diversity technique to combat fading in wireless communications space time codes are a highly bandwidth efficient approach to signalling within wireless communication that takes advantage of the spatial dimension by transmitting a number of data streams using multiple co located antennas there are various approaches to the coding structures including space time trellis coded modulation space time turbo codes and also layered architectures the central issue in all these various coding structures is the exploitation of multipath effects in order to achieve very high spectral efficiencies the spectral efficiencies of traditional wireless systems range between 1 5bps sec hz but by using space time techniques spectral efficiencies of 20 40bps sec hz have been possible hence space time coding enables an increase in capacity by an order of magnitude this is the main reason why space time codes have been included in the standards for the third generation wireless communication systems and ultimately why space time coding will be in great demand by individuals within industry and academia the comprehensive understanding of space time coding is essential in the implementation of 3g and as the only title currently available space time coding will be the standard text for researchers telecommunication engineers and network planners academics and undergraduate postgraduate students telecommunications managers and consultants
