- Toxicity** Toxic substances pose a significant risk to human health and the environment Their presence in traces can contaminate subsequent cargoes rendering them unfit for consumption
- 2 Reactivity** Certain substances can react with others causing chemical changes that affect product quality stability and safety
- Residue Difficulty** Some substances leave behind residues that are difficult to remove even with thorough cleaning procedures This increases the likelihood of crosscontamination

Realworld Examples and Case Studies

Case 1 A shipment of sunflower oil was rejected due to traces of a previously carried cleaning solvent detected in the tank The importer suffered significant financial losses due to the rejection and the need to find a replacement shipment urgently
