time series analysis and modelling represent a large study field implying the approach from the perspective of the time and frequency with applications in different domains modelling hydro meteorological time series is difficult due to the characteristics of these series as long range dependence spatial dependence the correlation with other series continuous spatial data plays an important role in planning risk assessment and decision making in environmental management in this context in this book we present various statistical tests and modelling techniques used for time series analysis as well as applications to hydro meteorological series from dobrogea a

the book illustrates the theoretical results of fractional derivatives via applications in signals and systems covering continuous and discrete derivatives and the corresponding linear systems both time and frequency analysis are presented some advanced topics are included like derivatives of stochastic processes it is an essential reference for researchers in mathematics physics and engineering

creativity influences each of our lives and is essential for the advancement of society the first edition of the successful encyclopedia of creativity helped establish the study of creativity as a field of research in itself the second edition published in 2011 was named a 2012 outstanding academic title by the american library association s choice publication featuring 232 chapters across 2 volumes the third edition of this important work provides updated information on the full range of creativity research there has been an enormous increase in research on the topic throughout the world in many different disciplines some areas covered in this edition include the arts and humanities business education mental and physical health neuroscience psychology the creative process and technology fundamental subjects are discussed such as the definition of creativity the development and expression of creativity across the lifespan the environmental conditions that encourage or discourage creativity the relationship of creativity to mental health intelligence and learning styles and the process of being creative creativity is discussed within specific disciplines including acting architecture art dance film government interior design magic mathematics medicine photography science sports tourism and writing a wide range of topics are covered here is a partial overview by topic business and organizational creativity advertising creative economies creativity consulting and coaching corporate creativity creativity exercises entrepreneurship group dynamics innovation leadership management of creative people patents teams and training the cognitive aspects of creativity altered and transitional states analogies attention breadth of attention cognitive style divergent thinking flow and optimal experience knowledge logic and reasoning metacognition mental models memory metaphors mind wandering mindfulness problem finding problem solving and remote associates the creative process attribution constraints discovery insight inspiration intentionality motivation risk taking and tolerance for ambiguity education children s creativity education intelligence knowledge metacognition play prodigies programs and courses talent and teaching creativity neuroscience research cellular matter grey matter cellular density eeg functional magnetic resonance imaging fmri music and the brain pupillometry systems the cerebellum and transcranial electrical stimulation psychology the big 5 personality characteristics bipolar mood disorders childhood trauma depression deviance dreams emotions expressive arts grit introversion jungian theory mad genius controversy openness schizotypy suicide therapy and counseling trauma and transcendence and transforming illness and visual art social aspects of creativity awards birth order criticism consensual assessment diversity eminence families friendships and social networks geeks mentors millennials networking rewards and sociology society and creativity awards climate for creativity cross cultural creativity destruction of creativity law and society social psychology social transformation voting war and zeitgeist technology chats computational creativity computerized text analysis gaming memes networks and maps and virtual reality

in spite of the amazing technological marvels of the modern world that have stemmed from science there is no agreed upon definition of what science is in this lively colorful and engaging work don degracia contends that science is a very weak form of what has been described for thousands of years in hindu india as samadhi samadhi is an advanced technique of raja yoga in which the meditating subject fuses with the object of meditation in a process that has been called knowing by being by

understanding science as a weak form of samadhi and comparing it to the knowledge acquired from yogic practices many of the limitations of science are brought to the fore these include the link between mind and body the role of the senses as middle men between the mind and the objects of perception why mathematics is unreasonably effective for describing the physical world and how and why power is unlocked by the human mind when correct knowledge is obtained

knowledge modelling and big data analytics in healthcare advances and applications focuses on automated analytical techniques for healthcare applications used to extract knowledge from a vast amount of data it brings together a variety of different aspects of the healthcare system and aids in the decision making processes for healthcare professionals the editors connect four contemporary areas of research rarely brought together in one book artificial intelligence big data analytics knowledge modelling and healthcare they present state of the art research from the healthcare sector including research on medical imaging healthcare analysis and the applications of artificial intelligence in drug discovery this book is intended for data scientists academicians and industry professionals in the healthcare sector

this book explores various aspects of biophysics from neurobiology to quantum biology and the consciousness of human beings and in the universe it examines eight different areas of natural intelligence ranging from time crystals found in chemical biology to the vibrations and the resonance of proteins and also discusses hierarchical communication in various biological systems written by senior and experts in the field in language that is lucid and easy to understand it is a valuable reference resource for researchers and practitioners in academia and industry

in this compelling exploration of life gregg braden merges the modern discoveries of nature s patterns fractals with the ancient view of a cyclic universe the result is a powerful model of time fractal time and a realistic window into what we can expect for the mysterious year 2012 and beyond applying fractal time to the history of the world and life he proposes that everything from the war and peace between nations to the patterns of human relationships mirror the returning cycles of our past as each cycle repeats it carries a more powerful amplified version of itself the key if you know where to look in the past you know what to expect when the same conditions return in the present and future for the first time in print the time code calculator gives you the tool to do just that through easy to understand science and step by step instructions discover for yourself how the conditions for 2012 have occurred in the past and what we can expect when they repeat the hot dates that hold the greatest threats of war and greatest opportunities for peace as well as economic cycles such as the stockmarket collapse of 2008 how earth s location in space triggers cycles of spiritual growth for humans your personal time codes for the key events of business relationships and change in your life how each cycle carries a window of opportunity a choice point that allows us to select a new outcome for the returning pattern what the 1999 ice cores from antarctica reveal about past cycles of climate global warming earth s protective magnetic fields and what these things mean for us today

seminar paper from the year 2016 in the subject geography earth science miscellaneous grade a atlantic international university course seminar international development i language english abstract this book fractal time by braden is fascinating the author centers his analysis on the year 2012 which many people gave interpretation to an interpretation that consisted of seeing that year as the end of the world besides that way of viewing things for the year 2012 was a confusion of events at least braden wrote the book before the coming of that year which proves that the explanations he gives in his book are trustful when braden works on the year 2012 his focus is about the cycles of times cycles of times that can occur in our day to day life and are more likely to repeat after many years according to the author we have to approach this year the best way possible to convey his message he talks about 20 times codes that are developed in the book time code 1 says that we are living the completion of a 58 185 year long cycle of time a world age that the ancient maya calculated would end the winter of the solstice on december 21 2012 we are living the end of time not the end of the world as a lot people predicted but the end of a world age for example the present world age began in 3114 b c and will end in a d 2012 time code 2 states that our ancestors recorded their experience of the last end of time showing beyond a reasonable doubt that the close of one world age is the beginning of the next and not the end of the world now the question might be what is the meaning of the end of world age those who came before us knew the end of the time was coming they knew because it always does accordingly braden asserts that every 5 125 years the earth and our solar system reach a place in their journey through the heavens that mark the end of such a time cycle only five generations in the last 26 000 years have experienced the shift

the ancient civilisation of the mayans created a calendar that is still incredibly accurate today through observation of the stars they developed an understanding of the patterns of history the ages of humankind and even calculated exact dates when a new age would begin the next age is set to begin on 21st december 2012 drawing upon the elaborate and infinite patterns observable in nature gregg braden shows the systems that lie behind the shaping of history taking his starting point from the mayans he shows their marking of the new age is but one instance of the cyclical nature of history by understanding how our actions are repetitions of those in the past gregg shows us a way to make sense of the present and the dramatic changes yet to come gregg braden s discoveries take us across the world and throughout time as he reveals the truth about our past present and future please note this is a new edition of the book previously published under the title fractal time the secret of 2012 and a new world age

this book provides an interdisciplinary introduction to the notion of fractal time starting from scratch with a philosophical and perceptual puzzle how subjective duration varies depending on the way we embed current content into contexts is explained the complexity of our temporal perspective depends on the number of nestings performed i e on the number of contexts taken into account this temporal contextualization is described against the background of the notion of fractal time our temporal interface the now is portrayed as a fractal structure which arises from the distribution of content and contexts in two dimensions the length and the depth of time the leitmotif of the book is the notion of simultaneity which determines the temporal structure of our interfaces recent research results are described which present and discuss a number of distorted temporal perspectives it is suggested that dynamical diseases arise from unsuccessful nesting attempts i e from failed contextualization successful nesting by contrast manifests itself in a win win handshake between the observer participant and his chosen context the answer as to why a watched kettle never boils has repercussions in many a discipline it would be of immense interest to anyone who works in the fields of cognitive and complexity sciences psychology and the neurosciences social medicine philosophy and the arts

in the book the following problems are considered are the concepts of fractal time and associated temporal fractal dimension consistent with the results of contemporary investigation in the domains of life social and physical sciences is the end beginning of time in the local scale no cosmic possible is the mapping of time procedure realizable is the space time a global manifold creating the background for description of psychical and material processes or they are connected with the local space time of a fractal nature the results presented enable getting deeper insight into nature of life and space time appearing as not a passive background but an active medium being in permanent interplay with biological processes taking place in it we are born to live with our own local fractal time and then it dies with us passing to the white noise stage identified with the death

essay from the year 2016 in the subject philosophy general essays eras grade a course psychology language english abstract as the world approached the year 2012 controversy theorists made significant impacts on what people would expect among them was the end of the world as humanity has known it the actual event that will erase life from the planet remained a subject of debate to some an asteroid would strike the earth while others proposed ideas of mystical proportions as 21 12 2012 came closer humanity was prepared for what it might bring with it to people's surprise the day passed like any other with no noticeable uniqueness although the mayan calendar ended its prediction of the end of the world did not become physically accurate however a new understanding of the year 2012 begun to surface in the book fractal time the secret of 2012 and a new world age braden gregg comes up with a reasoning that the old world ended and a new world started not in the physical form of ending but in form time

the fourteen chapters of this book cover the central ideas and concepts of chaos and fractals as well as many related topics including the mandelbrot set julia sets cellular automata l systems percolation and strange attractors this new edition has been thoroughly revised throughout the appendices of the original edition were taken out since more recent publications cover this material in more depth instead of the focussed computer programs in basic the authors provide 10 interactive java applets for this second edition

ralph n elliott wrote the wave principle in 1938 in 1975 benoit b mandelbrot coined the term fractal and in 1982 published his ideas in the fractal geometry of nature the book brought fractals into the mainstream of professional and popular mathematics in february 1999 benoit mandelbrot submitted an article to scientific american called a multifractal walk down wall street in the article he discussed how fractal geometry can be used to model the stock market curves the enclosed research reworks the mandelbrot multifractal from a time cycle rather than trend perspective to prove that time fractal is more proportionate than the price fractal and is the real law of nature which drives everything in nature the case is validated by illustrating power law curves in time cycle periodicities power law is seen across nature and in diverse social trends the power law in prices is a subject of extended study but there has been no research attempt made to prove power law in time cycle periodicities testing cycle periodicity needs large historical data long term time series are difficult to obtain and many emerging markets have seen stock market trading activity only start a decade back the continued prosperity after 1980 s was a reason why time fractals did not get researchers attention unlike price fractal which was actively studied and researched the fact that what we can see is what we can relate too more also made researchers focus more on price than time which is less visible cycles are not conventionally believed to be patterns patterns are understood either conventionally or as elliott wave fractals even few elliott wave practitioners have admitted the limitation of the

elliott wave structure as being more sharp on form than on time these were few reasons why time time fractals remained unproven this study further connects its findings with the existing research on various economic cycles finally extending the proof to a long short intermarket strategy on an asset pair
