life courses both professional and personal are often directed by unplanned experiences at crossroads which path is followed and which hard choices are made can change the direction of one's future. Wendell Bell's life illustrates how totally unforeseen events can shape individual lives as he notes despite our hopes and our plans for the future there is also serendipity feedback twists and turns chance and circumstance all of which shape our futures with sometimes surprising results in Bell's case such twists and turns of chance and circumstance led to his role in developing the new field of futures studies. In memories of the future Bell recognizes the importance of images of the future and the effect of these images on events to come such images dreams visions or whatever we call them help to determine our actions which in turn help shape the future although not always in ways that we intend. Bell illustrates partly with the story of his own life how people remember such past images of the future and how the memories of them linger and are often used to judge the real outcomes of their lives. This is a fascinating view of the work of an important social scientist and the people and events that helped define his life. It is also about American higher education especially from the end of World War II through the 1960s and 1970s a period of educational transformation that included the spread of the merit system the increase in ethnic racial gender and social diversity among students and faculty and a massive increase in research and knowledge.

from the beginning of time humans have been driven by both a fear of the unknown and a curiosity to know. We have always yearned to know what lies ahead whether threat or safety scarcity or abundance throughout human history our forebears tried to create certainty in the unknown by seeking to influence outcomes with sacrifices to gods preparing for the unexpected with advice from oracles and by reading the stars through astrology as scientific methods improve and computer technology develops we become ever more confident of our capacity to predict and quantify the future by accumulating and interpreting patterns from the past yet the truth is there is still no certainty to be had. In this very short introduction Jennifer Gidley considers some of our most burning questions what is the future is the future a time yet

to come or is it a utopian place does the future have a history is there only one future or are there many possible futures she asks if the future can ever be truly predicted or if we create our own futures both hoped for and feared by our thoughts feelings and actions and concludes by analysing how we can learn to study the future about the series the very short introductions series from oxford university press contains hundreds of titles in almost every subject area these pocket sized books are the perfect way to get ahead in a new subject quickly our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable
