equine melanomas are the most common neoplasms in older grey horses until now no curative therapy is established xenogenic dna vaccination represents a promising therapeutic approach goal of the present study was to evaluate the safety and clinical efficacy of vaccination of grey horses with natural occurring melanomas with midge th1 vectors encoding for equine eq il12 and eq il18 alone or in combination with human gp100 hgp100 or human tyrosinase htyr three groups each

n 9 of adult grey horses with variable numbers of melanomas received three intramuscular and three intradermal peritumoral vaccinations each group was treated with midge th1 vectors coding for eqil12 and eqilrap il18 one group group gp100 was additionally treated with 500 µg hgp100midge th1 and one group with 500 µg htyrmidge th1 group tyr the third group did not receive additional dna group il12 18 vectors were complexed with the transfection agent saint 18 the injections were performed on days 1 22 and 78 intradermally around one selected melanoma locally treated melanoma and intramuscularly as a systemic treatment a general examination of the horses and evaluation of local reactions at the injection site were performed daily during hospitalisation on the day of each injection and 3 days after each injection as well as on day 120 in each horse the locally treated melanoma and up to 8 non locally treated melanomas were measured before each injection and on day 120 by calliper and ultrasound the relative volumes were calculated in relation to day 1 100 for the evaluation of the generation of specific cd8 cytotoxic t cells against hgp100 and htyr peripheral blood mononuclear cells pbmcs isolated before each injection and on day 120 were stimulated in vitro with autologous dermal cells transfected with hgp100 or htyr interferon γ ifn γ as a response to this specific stimulation was measured by intracellular immunofluorescence staining specific serum antibodies against hgp100 and htyr were measured at equivalent time points as cytotoxic t cells using a cell based flow cytometric assay human embryonic kidney cells transfected with hgp100 or htyr served as a source for antigens the only consistent abnormal finding upon clinical examination of the treated horses was an increased body temperature a significant increase in body temperature 38.7 0.59 c was recorded after 40 of the 81 injections and usually lasted for one day local inflammatory reactions and depigmentation were observed in all groups starting at day 3 after the first application the relative tumor volume was significantly reduced to 71.5 29.73 calliper measurements and 87.0 24.42 ultrasound measurements there were no significant differences detected between groups gp100 tyr and il12 18 no difference was seen in reduction of tumor volume between locally treated and non locally treated melanoma neither a cellular nor a humoral immune response against the vaccine antigens could be detected in this study treatment with eqil12 and eqilrap il18 dna in combination with saint 18 showed a systemic effect against grey horse melanoma there was no additional clinical or immunological effect observed by vaccination with midge th1 vectors encoding hgp100 and htyr it remains unclear whether the antitumoral effect was caused by the interleukins unmethylated cpg motifs or the induction of an immune reaction by the combination of dna and transfection reagent reasons for the absence of a specific immune response may be an inadequate selection of dosages or treatment interval it is also possible that the sensitivity of the immunoassays was too low to detect a subclinical immune response further studies to characterize the antitumoral effects of the treatment used in this study and modifications of the treatment protocol to achieve a potential

specific immune response are warranted

the arterial pattern of the upper limb is one of the systems that shows a large number of variations in the adult these variations have been observed frequently either in routine dissections or in clinical practice it is very important to understand the arterial variations of the arm because procedures are commonly performed on the upper extremity vessels in cases of acute arterial injury and occlusion although the variability of vascular anatomy of upper extremity has been studied in large numbers of dissections there is few information on the arterial variations in vivo this is the first study done in malaysia on the vascular patterns of arm and forearm in vivo using the doppler ultrasonography there were eight hundred upper limbs 400 subjects of staff and students of international islamic university malaysia examined with logiq p5 general electric ultrasound machine using 12l rs linear probe from the axilla to the wrist the brachial antebrachial arterial system was mapped to determine the variations the data was analyzed with statistical package spss 19 among them 61 of the upper limbs were found to possess the variants there are seven types of variants encountered which are a pma with 26 21 cases b brachioradial artery bra 17 14 cases c superficial brachioulnar artery sbua 12 10 cases d double radial artery dra 06 5 cases e brachioulnar artery bua 02 2 cases f radial artery loop 01 1 case and g aberrant radial artery 01 1 case variations found in the arms are the bra sbua and bua while in the forearm are pma dra aberrant ra and ra loop among them four cases with pma were associated sbua bua bra and aberrant ra on the same side of the upper limbs another case possessed bra together with dra it is more common in females 22 subjects than males 20 subjects and on the right

side 28 cases than the left 21 cases however these differences are not statistically significant $p > 0.05$ variant anatomy of the brachial and antebrachial arteries in this population occurs in approximately 10.5%. academically this provides and expands the existing fundamental anatomical knowledge clinically the knowledge of the vascular pattern of Malaysian populations will benefit in elevation of arterial flaps and can also avoid intra arterial injuries and complications during any upper limb vascular procedures
