in recent years logistics outsourcing has gained increasing importance and today is used by a large number of firms across virtually all industries worldwide logistics service providers have developed a wide array of services that are utilized to improve logistics processes and mainly to cut costs this book uses state of the art scientific methods to reveal that most firms currently do not realize the full potential of logistics outsourcing it shows the complexity of outsourcing performance and that its true drivers lie in the relationship between service providers and their customers through the results of a large scale empirical survey the book also emphasizes the importance of a firm s approach towards outsourcing solely striving for cost reductions may be a dead end while the often overlooked increased logistics service levels are equally important for boosting logistics performance in the light of current outsourcing practices this indicates substantial room for improvement for most firms

when we began to consider the scope of this book we envisaged a catalogue supplying at least one abstract definition for any finitely generated group that the

reader might propose but we soon realized that more or less arbitrary restrictions are necessary because interesting groups are so numerous for permutation groups of degree 8 or less i.e. subgroups of  $S_8$  the reader cannot do better than consult the 8 tables of osephine burns 1915 while keeping an eye open for misprints our own tables on pages 134-142 deal with groups of low order finite and infinite groups of congruent transformations symmetries and alternating groups linear fractional groups and groups generated by reflections in real euclidean space of any number of dimensions the best substitute for a more extensive catalogue is the description in chapter 2 of a method whereby the reader can easily work out his own abstract definition for almost any given finite group this method is sufficiently mechanical for the use of an electronic computer
