this volume provides a comprehensive overview of the nature of attentional and visual processes involved in language comprehension key concerns include how linguistic and non linguistic processes jointly determine language comprehension and production and how the linguistic system interfaces with perceptual systems and attention language scientists have traditionally

considered language in isolation from other cognitive and perceptual systems such as attention vision and memory in recent years however it has become increasingly clear that language comprehension must be studied within interaction contexts the study of multimodal interactions and attentional processes during language processing has thus become an important theoretical focus that guides many research programs in psycholinguistics and related fields

this book offers a broad based account of bilingual processing drawing on research findings and current thinking from various domains across cognitive science the theoretical approach adopted is the modular cognition framework in which language processing is characterized as an interaction between dedicated linguistic systems and the other modules of the human mind the latter provide the internal context of bilingual processing this internal context involves goals value emotion self and representations of the external context the book combines all these elements into a coherent picture of the bilingual s internal context and the way it shapes processing it then shows how some central concepts in cognitive science and bilingualism fit in with and follow from this view these concepts include working memory consciousness attention effort codeswitching and the possible cognitive benefits of being bilingual the book should be of interest to professionals in the field as well as postgraduate students and advanced undergraduates
