even in highly automated production environments some tasks such as bonding and

assembly still rely on human adaptability these tasks are often time critical run in parallel and are spatially distributed across multiple workstations how can augmented reality ar help reduce complexity and support workers in managing these demanding processes in this dissertation manual manufacturing using bonding as a representative case is investigated and it is explored how ar can assist in the execution of complex parallel and time critical tasks following a human centered design hcd approach the research is grounded in observations and expert interviews leading to three central research questions how can time critical parallel tasks be visualized within the field of view fov how can they be guided outside the fov how can users gain an overview of distributed tasks findings show that ar reduces task complexity improves performance and is preferred over traditional instructions however supporting more than two concurrent tasks increases cognitive load for spatially distributed tasks location based ar cues alone are not sufficient additional peripheral visual signals and spatially registered overviews are essential for effective support

this report evaluates a complete range of time critical conventional strike options within several realistic scenarios it explores and illuminates various attributes associated with the different means of accomplishing a time critical conventional strike from strategic standoff capability the report pinpointed four parameters of interest to focus on target set accuracy basing and kill mechanism in addition the author was asked to assess each alternative strike capability using four principal measures of effectiveness and issue specific recommendations for preferred approaches based on specific dominate requirements illustrations
