the last few years has within museums witnessed nothing short of a revolution worried that the very institution was itself in danger of becoming a dusty forgotten culturally irrelevant exhibit vigorous efforts have been made to reshape the museum mission fearing that history was coming to be ignored by modern society many institutions have instead marketed a de intellectualised heritage overly relying on computer technology to captivate a contemporary audience the theme of this work is that we can do much to reassess the rationale that inspires contemporary collections through a study of seventeenth century museums england s first museums were quite literally wonderful founded that is on the disciplined application of the faculty of wonder the type of wonder employed was not that post romantic idea of disbelief

but rather an active form of curiosity developed during the renaissance particularly by the individuals who set about gathering objects and founding museums to further their enquiries the argument put forward in this book is that this museological practice of using objects actually to create as well as disseminate knowledge makes just as much sense today as it did in the seventeenth century and further that the best way of reinvigorating contemporary museums is to return to that form of wonder by taking such a comparative approach this book works both as a scholarly historical text and as an historically informed analysis of the key issues facing today's museums as such it will prove essential reading both for historians of collecting and museums and for anyone interested in the philosophies of modern museum management

collective insight of key thought leaders in the field to clarify and reshape the vision of smart cities smart cities energy and climate governing cities for a low carbon future is a seminal work that draws together insights and case studies on post carbon urbanism across a variety of fields from smart energy grids to active buildings sustainable mobility and urban design another objective is to foster an understanding of how digitally enhanced smart city solutions can assist energy transitions and what new developments and challenges they bring in areas ranging from urban governance to energy security key topics covered in this book include recent developments in urban planning building design and smart technologies urban scale digital platforms and innovation for clean energy systems energy efficiency and net zero policies socio technical and political relationships in climate neutral cities and smart cities context rich situated perspectives from europe africa and asia smart cities energy and climate serves as a primary reference for scholars students and policy makers interested in the conceptual technical economic and political challenges associated with the transition towards a smart and sustainable urban future

leverage technology to propel humankind toward a better future a new age of reason harnessing the power of tech for good provides a roadmap for integrating emerging world changing technologies such as ai robotics chips sensors and quantum computing to solve some of today's thorniest and most pressing problems like climate change and world hunger the author offers inspiring examples of companies using technology to positively impact humanity the book provides an actionable playbook to transform your organization around this mission including how to develop a tech for good strategy how to evolve the c suite to deliver on this mission how to market it as well as measure outcomes the author also discusses the latest technology breakthroughs delivering positive world outcomes such as extending a surgeon's eyes and hands via robotics surgical systems to improve patient outcomes computer vision tech that enables farmers to maximize crops to feed our burgeoning population ai robotics that identify and fight wildfires bringing together a collective of major thinkers on this subject and providing guidance for a better
