the idea that the caribbean could be devolving downward in wealth function and
sovereignty has become a recurrent theme in both academic and popular literature
by focusing on some of the current issues facing caribbean nation states the editors
and contributors to this volume hope to inform and contribute to the ongoing
debate on the broad themes of sovereignty and development and the prospects for
survival of caribbean nation states in a globalised world while some of the papers
seek to describe and analyse the range and complexity of the challenge to national
sovereignty and public policy autonomy others focus on issues relating to small

country size gender and ethnic tensions security constitutional reform and regional integration the result is a balanced perspective the contributors do not gloss over the problem faced by the region at the same time they do not present a hyper pessimistic picture of caribbean development prospects what gives the collection a particular dynamism is the way in which the authors have challenged the terrain of political possibilities traditionally defined for small peripheral societies

first published in 1998 this volume uses guyana as an excellent comprehensive case study to examine various sectors operations effects upon the environment and the ways in which the sector can impact upon the vitality and development potential of other sectors the authors attempt to demonstrate how it is possible to adjust current sectoral activities for improved resource utilisation they begin in the interior looking at mining and forest resource exploitation attention then moves towards the coast looking at agriculture fishing human settlement and service provision a review of industry transport and energy follows before examining biodiversity tourism and the amerindian community finally a detailed analysis is presented of the challenges to be faced in devising a sustainable development national strategy

top researchers share their expertise on conservation and sustainability in areas that extend across national borders this informative and insightful book examines strategies being used by governments and ngos to protect wild areas that cross national borders and cultural linguistic and socioeconomic boundaries in addition to presenting case studies from five continents transboundary protected areas the viability of regional conservation strategies provides several theoretical overviews that suggest viable approaches to conserving biodiversity in these difficult to protect areas from the editors historically the borders of protected areas have been defined by convenient social political or proprietary boundaries rather than by ecological boundaries today many scientists and practitioners are in agreement that the world s biodiversity and other natural resources can best be conserved on an ecosystem or regional scale which may or may not be consistent with political boundaries efforts to protect land on an ecosystem scale have led to the creation of numerous transboundary protected areas also referred to as international peace parks or transfrontier conservation areas these areas which often cross linguistic socioeconomic and cultural boundaries as well as national borders represent regional conservation at its most complex while many scientists and practitioners promote eco regional approaches to conservation many also advocate pursuing conservation goals on local or community scales conservationists therefore endeavor to achieve a seemingly incongruous mandate to pursue top down regional goals

using bottom up local approaches transboundary protected areas the viability of regional conservation strategies addresses the vital questions associated with this mandate is it reasonable and realistic to approach regional conservation this way what strategies have been employed to achieve these goals and how successful have they been who benefits from transboundary conservation and what are the costs reflecting the information delivered at the 2001 conference of the yale chapter of the international society of tropical foresters istf this book provides you with the best answers available at this time the contributors include social and natural scientists resource managers policymakers and community leaders transboundary protected areas the viability of regional conservation strategies brings them together for an interdisciplinary exploration of these questions and other critical issues related to conservation in and around transboundary protected areas specific cases that are thoughtfully examined in transboundary protected areas the viability of regional conservation strategies include the public reaction to the yellowstone to yukon y2y conservation initiative the ways in which the establishment of southern africa s existing and proposed transfrontier conservation areas tfcas can help conserve biodiversity aid socioeconomic development and promote international peace development and conservation efforts in the maloti drakensberg mountains of southern africa which straddle the borderlands between south africa and lesotho the cultural aspects of protected area management in venezuela and guyana the impact of transfrontier collaboration as evidenced by the international gorilla conservation programme igcp in the virunga bwindi region of africa uganda rwanda and the democratic republic of congo how the nepalese have addressed the problems of poaching commercial logging illegal harvesting and smuggling of forest products and illegal trade of wildlife and wildlife products in the eastern himalayas by implementing a transboundary biodiversity conservation initiative helpful maps tables and figures make geographical regions and conservation information easy to assimilate
