this text presents a new approach to the use of hypnotic suggestion for years hypnotherapists have used scripts which are aimed at a particular problem like smoking or weight loss rather than aiming at the client who smokes or has weight issues trevor silvester suggests that it is not the problem that is the problem it s the client s unique relationship with the problem that s the problem the book aims to free you from the constraints of scripts and enable you to use your creative skill to weave subtle spells that empower your clients by changing their model of reality it presents the science behind suggestion and the means of using that science to create magical ways of influencing others

hypnotism is widely accepted today at its proper level as a legitimate field of scientific inquiry and a useful tool of psychotherapy its potential has been recognized by the british medical society and the american medical association and courses on the subject are appearing in medical schools and in training programs for psychiatrists previously hypnosis had a chequered career over a period of centuries going through cycle after cycle of general approval and then total eclipse can we be sure that hypnosis will retain the general interest it possesses today the fate of this book indicates how fragile the reputation of hypnosis is written nearly a century ago and translated into english nearly eighty years ago it has always been acknowledged as a great classic yet it has been out of print nearly seventy five years it was not outmoded it was not suppressed it has simply been neglected its author was fully respected in medical circles bernheim conducted his research at one of those moments in medical history when the fact of hypnotic phenomena was accepted by the medical profession bernheim saw that the results he produced involved more than the ability to produce the hypnotic trance he saw his relation to the patient as a special relationship in spontaneous sleep the sleeper is in relation to himself alone although he proceeds to hallucinate to dream in the induced sleep of hypnotism however the subject retains the memory of the person who has influenced him to sleep and this is the source of the hypnotist s unique power over him this rapport between hypnotist and

patient is the key bernheim describes cases in which this rapport does not occur and therefore there is no therapeutic effect

excerpt from hypnotism and hypnotic suggestion a scientific treatise on the uses and possibilities of hypnotism suggestion and allied phenomena it can be laid down as a fundamental principle that there is nothing unnatural or occult in the phenomena of hypnotism what may appear mysterious to us at present will be found to be quite in conformity with the laws of nature when the facts are more carefully determined the essential factors in most phenomena of hypnotism may be said to be first the production of a sleepy or dazed condition in which the subject is unusually sensitive to suggestions given by the hypnotized and second the giving of suggestions that are followed by actions hallucinations etc it is my belief that most of the phenomena of hypnotic suggestion can be produced in sane persons in a perfectly normal condition by merely choosing the appropriate suggestions here is an experiment that can be performed by anyone i perform it regularly every year on classes of twenty to twentyfive pupils the current from a battery or a dynamo is sent through a thin wire the strength being regulated so that the wire very slowly becomes warm each person takes such a wire between thumb and finger he is told to say now at the very first instant he feels the wire begin to become warm after the warning all ready the switch is turned on with a loud snap in a short time the heat is faintly felt and the subjects begin to say now one after another the experiment is then to be repeated a second time the warning all ready is given as before but a secret noiseless switch is turned so that when the other switch is snapped no current passes through the wires the subjects soon call out now as before although no heat whatever is developed in the wires in this way a pure hallucination is developed on the basis of a mere suggestion without any of the preliminary manipulations common to hypnotism it is especially remarkable that this can be done with a large class the larger the better about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at [forgottenbooks.com](http://forgottenbooks.com) this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged
