do we become better or worse drivers as we age why do we indulge in risky behaviour when driving will technology remove the human role in driving forever the psychology of driving is a fascinating introduction into the psychological factors at play when people get behind the wheel exploring the role of personality traits and cognitive functions such as attention in driving the book considers why human error is most often to blame in road accidents and how we can improve driver safety the book debunks the myth that men are better drivers than women and considers why some people indulge in knowingly risky behaviour on the road including using mobile phones and drink drug driving in a time when driverless cars are becoming a reality the psychology of driving shows us how human behaviour and decisions can still affect our lives on the road

this special issue is based on papers presented some of the international conference of applied psychology in madrid in 1994 over 100 presentations were made at this conference covering almost any conceivable aspect of applying psychology to traffic and transport obviously within a single special issue it is impossible to provide a comprehensive concise overview of the state of the art within the field instead a thematic approach is followed focusing on the motivational aspects of risk taking and deviant behavior preceded by a general overview of the main topics in the field it is concluded with a research note about the analysis of the psychological literature on driver behavior simonet and wilde discuss risk perception and acceptance and acceptance within the framework of risk homeostasis theory west and hall discuss individual differences in terms of risk social motivation and attitudes towards traffic law violations groeger and chapman address the same issues but in a strictly experimental stance manipulating normative information presented to drivers these papers are a representation of where traffic psychology seems to be heading a realization that driver behavior is determined not only by performance factors i e what he or she is willing to do which are governed by individual cultural and situational variables the literature analysis carried out by sivak shows that this focus is as yet not apparent in the general literature where alcohol and driver performance still are the dominant topics it is hoped that this special issue will convince psychologists that traffic and transport is a fascinating field of application

rural roads constitute the most dangerous road category with regard to the number of fatal accidents in order to increase traffic safety on rural roads it is necessary to take into account not only their inherent properties but also their effect on behaviour gert weller develops a psychological model for driving on rural roads which is validated in three empirical steps laboratory simulator and driving experiments his results provide insight into the possibilities of how driving behaviour on rural roads can be influenced and give practical guidance for the enhancement of rural road safety the book is written for psychologists in the fields of traffic psychology and human factors research traffic engineers road planners as well as for political decision makers in traffic planning departments

excerpt from the psychology of driving factors of traffic enforcement for the past several years we have studied a number of phases of highway safety which have been published in various magazines scientific journals and other publications a large number of requests have been made for the papers and it has been suggested that they be brought together into a volume of reasonable size which would be available for anyone having an interest in these specific investigations most of the papers are based on experimental studies and the conclusions drawn we have tried not to include items which are of dubious nature or which are based mostly on opinion we are indebted to the ohio state university psychological laboratory for the start in this field and to the department of psychology at iowa state university for the opportunity to pursue these studies through the years in many cases the results were obtained by collaboration with different persons and in such instances credit will be given the various studies have been aided by grants from the american optometric association the allstate insurance company the american automobile association the u s army the allied mutual insurance company the national research council thomas j lipton inc and the outdoor advertising association the

director of the various studies has been responsible for their development into final shape the titles have been arranged as nearly as possible in a logical order credit is due dr virtus w suhr for most of the material in chapter x on rest pauses numerous graduate students have worked on phases of other studies as is indicated in the references at the end of each chapter about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

a road traffic participant is a person who directly participates in road traffic such as vehicle drivers passengers pedestrians or cyclists however traffic accidents cause numerous property losses bodily injuries and even deaths to them to bring down the rate of traffic fatalities the development of the intelligent vehicle is a much valued technology nowadays it is of great significance to the decision making and planning of a vehicle if the pedestrians intentions and future trajectories as well as those of surrounding vehicles could be predicted all in an effort to increase driving safety based on the image sequence collected by onboard monocular cameras we use the long short term memory lstm based network with an enhanced attention mechanism to realize the intention and trajectory prediction of pedestrians and surrounding vehicles however although the fully automatic driving era still seems far away human drivers are still a crucial part of the road driver vehicle system under current circumstances even dealing with low levels of automatic driving vehicles considering that more than 90 percent of fatal traffic accidents were caused by human errors thus it is meaningful to recognize the secondary task while driving as well as the driving style recognition to develop a more personalized advanced driver assistance system adas or intelligent vehicle we use the graph convolutional networks for spatial feature reasoning and the lstm networks with the attention mechanism for temporal motion feature learning within the image sequence to realize the driving secondary task recognition moreover aggressive drivers are more likely to be involved in traffic accidents and the driving risk level of drivers could be affected by many potential factors such as demographics and personality traits thus we will focus on the driving style classification for the longitudinal car following scenario also based on the structural equation model sem and strategic highway research program 2 shrp 2 naturalistic driving database the relationships among drivers demographic characteristics sensation seeking risk perception and risky driving behaviors are fully discussed results and conclusions from this short book are expected to offer potential guidance and benefits for promoting the development of intelligent vehicle technology and driving safety
